

PINK FORMAL

TERMS OF SALE

CASH WITH ORDER, FLEASE, unless you have an account with us. Postage Paid on orders over \$5.00. Orders for less add 50c to help defray packing and postage.

SHIPPING DATES. We will start shipping the last week in June and will continue shipments up to October 1st. Please do not ask for earlier or later shipments. We have a certain amount of work to do for ourselves, too, and it is difficult to accomplish this if orders continue to come late in the season. We will try to ship at any specified date (within the shipping season) for your convenience, but since the bulk of our customers request July 15th to 30th shipping, please allow us some leaway, if possible. We try to be prompt, courteous and generous. Orders will be acknowledged with approximate shipping date given.

We are rather rushed at shipping time. If you should write a note please do so on separate sheets from your order blank. List all varieties wanted, and those you would like to have as extras on the order sheet, for if scattered through a letter one may easily be omitted.

DISCOUNTS — **EXTRAS.** ON ORDERS FOR \$25.00, or more, a discount of 25% is offered, except on items marked "Net." Give us a list of Wants and Alternates so we may be generous, and with varieties we are assured you would like. Do not hesitate to list some of the newer introductions, and the larger the order the more "extras" you should list and may expect.

TELL'S IRIS GARDENS

Greetings 1956

Phone: FRanklin 3-1845 Provo, Utah

Dear friends,

Each year I "ask myself" when this enthusiasm will wane. The only answer "Uncle Tell" gives is a showing of renewed vigor and an occasional whisper: "The surface has just been scratched." And so it has. One has only to grow seedlings, visit other hybridizers, or buy the novelties, to see that great strides are being made. I doubt there is another flower grown that has so many devoted hybridizers as has the iris, although it looks as though the hemerocallis is now gaining in this respect. Perhaps the ease with which these two flowers may be "hybridized" accounts for this, in part. Yet most of us feel the urge to create (as does the artist) and while most of us are not artists with brush, chisel or clay we can work with God in the creation of real beauty. And, as I have written before, when we have created a new and distinct flower that increases normally we can, in time, share it with others, and our creation may blossom for fanciers the world over.

All the pioneering has not been done, by any means. I shall write more of this in the Hybridizing hints which you will find at the back of this year's issue; and I hope you may enjoy these notes which, of course, will not be extensive, but may give you an insight into possibilities of breeding fine new flowers, and unusual colors.

This year's introductions are from several fanciers with whom a great many of you are familiar. Mrs. Crosby's iris are now getting distribution and favorable notice throughout the world. She, by the way, has started back to college, now that she has her family of three somewhat on their own. A son in the Marines, a daughter in high school and a son in junior high school. Her husband, Sam, is working nearby for a change which gives him more time for his family rather than road-travel. Luzon (Mrs. Crosby), as could be expected, is taking considerable botany and art and it might interest you to know that taking time out to raise a family and produce fine iris, gladiolus and hemerocallis seedlings has not hampered her ability to study, again, for she has made the honor roll each semester and was awarded a special scholarship. But to her iris! Last spring I took three or four stalks of her seedlings (and named iris) to the Utah Iris Society show along with my own. Unfortunately the very tall Kanab rubbed against the top of my truck slightly which put it out of the finals in selection for queen of the show (which, by the way, went to a beautiful spike of Limelight exhibited by Mr. Wallace) but it was on the table, even so, to near the last and seemed especially beautiful under artificial light (unusual for a brown-toned iris) but her white seedling (then under number) was selected for runner-up to queen of the show and this has been named (and I am introducing it this year) Little Sweetheart. It was not returned to the seedling table, through some error, for we have a unique way of showing our seedlings in Utah - they are shown first in the color classes to which they belong and if good enough may win the award (or awards) in their color classes and are then returned to the seedling table for the placings there. This, of course, may show if a variety is good enough to compete with, or excell, existing varieties in the different color sections. Theoretically new seedlings should outclass the named iris, but if they do not then the hybridizer has some more work to do and this may spur his efforts.

Mrs. Jacobson (Val) showed a very unusual seedling that took kindly to artificial light and this also was on the table to the very last for queen of the show. It was voted the highly commended award under number 53-10 and has since been named *Misty Chiffon*, and I am pleased to release a few rhizomes this year.

At the 1954 A.I.S. convention here in Utah quite a group of followers scrutinized Mrs. Cavagnaro's unusual white seedling in the Fisher Harris Garden. We learned, later, that this iris was from Lady Mohr pollen on Alba Superba—quite a feat since a great many of us have wasted hours using Lady Mohr's pollen, year after year, with no results (no seed, that is) and we learned it had been named ANYTIME. Mrs. Cavagnaro, generous with her seedlings, had distributed this without formal introduction to those who had seen and wanted it, but she gave me permission to formally introduce it this year, and so I am. Here is a grandmother wrapped up in her family, but enjoying her gardening, and the art of creative hybridizing as well—surely a rich, rewarding experience.

Also at the 1954 convention was a red iris in the garden of Mrs. Charles Parsons (Fisher Harris' sister) — This proved to be Mr. Wall's Contact which I am pleased to bring out.

Willis Madsen and I have been working hand-in-hand for several years. It was 1952 when a bed of some 30,000 seedlings started to bloom in his back yard (my seedlings) and I believe he spent as much time in them as I did. It was he who first saw *Pink Enchantment* and a somewhat enthusiastic phone call: "You better get down here—there's a 'hellofa' good pink opening." I jumped in the car and in a few moments was standing along side him looking at a new depth of color in pink iris. He and I both used its pollen and this year he introduces the first child of *Pink Enchantment*. Years earlier, however, Willis had admired *Ruffled Gem* in my garden while it was still under number and acquired it. To this he applied pollen of *Chantilly* (a natural cross) and bloomed a host of lace-edged seedlings the most charming of which we introduce this year

as *Cutie Pie*. This iris, by the way, produced the most magnificent white-laced seedling I ever hoped to see, but unfortunately it bloomed without increase and is lost to the world forever, although its pollen scattered hither and you may duplicate (or better) the father and some day Willis or I will introduce a fabulous, futuristic creation.

My correspondence has brought me many a friend and one of the warmest is H. Senior Fothergill of London — President of the British Iris Society. His genuine sincerity and his enthusiasm are perpetual. All who know him (I am told) love and respect him. I've bloomed many of his seedlings (some I have not grown well, I am sure but his *Dorothy King* stood out and I am glad to finally bring it to the introduction pages of my catalog.

Mrs. Ray Jensen of Logan, Utah, I met first through correspondence and by recommendation of Dr. Daynes who knew I was interested in the Mohr derivatives. Mrs. Jensen, too, is a young grandmother with varied interests, but a keen love of iris breeding. My family and I motored to Logan (for the first time in iris season) to visit and see her work. While here we were taken with a new deep apricot or orange-toned iris (which I am proud to say "I am grandfather of") she has named Gail for her son who is serving as a missionary for the Later Day Saints Church in Sweden or Norway (I forget which) but a handsome boy he is, so the iris is appropriately named and will not make either blush for shame for some years to come (as all things become superceded in time, I suppose). She had other beauties in the garden, and of these we may speak (write) of at a later date.

C. J. Paul of Salt Lake City has long been interested in the Mohr family iris, and I first met Mr. Paul when I went to see his Altamohr. That was 1947 and Mr. Paul is still working in the Mohr family almost exclusively. Last year he bloomed I. gatesii for the first time and I believe he succeeded in duplicating the cross that produced the famous Wm. Mohr which so intrigues him. The iris that I am bringing out for him this year most nearly resembles I. gatesii of all the seedlings I have seen from this remarkable but difficult parent. It most nearly resembles one of Dr. Loomis' seedlings which he has nicknamed "Leopard Mohr" but may never introduce. We will hear great things of Mr. Paul and of his son Lloyd who has caught the virus and is now working with Lloyd Austin of Placerville (Rainbow Hybridizing Gardens) doing the thing he loves — hybridizing, research, embryo culture, etc. Surely he has a wealth of material to "play" with at this Oncocyclus meca spot. Mr. Paul will have his iris and his son to make him famous. Surely enough to bring satisfaction to any man!

I met Mr. and Mrs. Eugene Hunt (she of "Little Brown Koko" story fame) some years ago. Rather embarrassing for me it was, too, since he had sent me a plicata seedling that did not especially like our climate and I did not catch his name but did hear (distinctly) that he was from Oklahoma, so I proceeded to ask him how he liked this certain seedling and he told me it did very well in their climate. I gave him a rather sharp criticism of what I thought "just another" plicata. You know, of course, how I wished the earth to swallow me up when I learned I had been denouncing his favorite child! But he was supreme and we immediately fell in love with both of them, as well as the "Little Brown Koko" stories. I knew, anyway, this enthusiastic, persistent, hybridizer would come up with something good, and if he would forgive me I might even introduce such a one for him, or at least be privileged to some day grow it. Such an iris is his Hunt Mohr, is only the first of many this man will eventually offer to the iris lovers of the world. A quiet, unassuming school teacher who has found happiness in working with God's creations often under adverse elements that only good Oklahoma fanciers can appreciate, but they prove that iris are the ideal hardy perennial.

I've already introduced two iris for Mrs. Noyd. Here, too, is another of the not-so-rare breed of enthusiastic iris hybridizers. Mrs. Noyd "plays the field" and is breeding iris in every color range. She has a most novel and charming dark beauty in *Inky Blubeard*.

A friendship that got off to a stormy beginning has culminated in "mutual admiration" pacts, I am happy to say. I was a little put out that Mr. D. P. (Wick, as he is known to all his friends) Wickerham would feed *Pink Formal* to the Borers when I only had a dozen plants in cultivation. Perhaps feeding the center portion of the plant only stimulated side-growth, however, and may have resulted in better increase for future supply. But I have learned that against the "acts of God" we do not "cry" and that no one actually feeds rare plants to borers — borers only choose these because they are more tasty! Anyway, from this connoisseur and hybridizer of iris comes a beautiful variety that should be, as well, a great breeding subject. *Mac-O-Chee!*

Wm. J. McKee needs no introduction to iris lovers. Perhaps no other is such an adherent to line-breeding. The Pedigree of MONIQUE, which I introduced for him this year, is proof of that. He is, however, a man of infinite patience and perseverence as this iris will attest. I am sure most of us would give up long before the 4th generation had been realized to reach a goal (within a family) for a certain color, Monique is going to be highly useful to those who work for yellow-amoena color pattern, or by-product which may come from them. But if satisfaction means what it should Mr. McKee must be a most happy man. Many would be happy to have accomplished half what this man has achieved. He served as president of our A.I.S. for two years (1940-1942). Was awarded the Distinguished Service Medal of the A.I.S. in 1943, and the Hybridizers Medal in 1953. The awards his iris have won since he started hybridizing in 1923 attest, again, to his success. The book which he and Prof. Harrison co-authored "Half Century of Iris" is a rich and exhaustive work (even with some technical errors) which any serious-minded hybridizer would enjoy and learn much. Yes, truly a talented man who continues to give us remarkable iris.

Mr. Jim Gibson is known for Gibson Girl, and last year I was privileged to introduce his beautiful NOMOHR. This year I am pleased to co-introduce with Cooley Gardens his lovely plicata TAHOLAH. There are lots of plicatas, but this one seems to set a new standard, and from what we hear is doing great things as a breeder. Mr. Gibson is another restless school teacher who refuses to enjoy only the "written word" since he, too, finds satisfaction in working with chromosomes and the earth—never failing to marvel at the miraculous colors that all come from a common source—soil and water!

Mrs. Margaret Albright is no stranger to most of you, and surely became a friend to anyone who met her during the 1954 convention which she so ably saw through as president of the Utah Iris Society. I have jokingly "turned pale" at some of the crosses she has been making since starting hybridizing about 1946. She certainly has not been an orthodox hybridizer, in any sense of the word, but that she is getting results to a marked degree is apparent. Margaret has not grown thousands of seedlings as most of us have—only hundreds, yet the high degree of excellence of her seedlings is rather amazing. She seems to have a sense (perhaps a fifth sense) or feeling for hybridizing and her choice of parents seems always to be right. While she has some big things in the offing we are taken with the charm of some of her smaller border iris, and we think you will like them, too.

A postal worker (soon to be retired) who has several hobbies (as does his wife who does beautiful ceramics) is Les Peterson, breeder of *Short Song*, introduced in 1954. Last year his fine red iris, named *Young Brave*, received the Highly Commended Award under number 53-23. All who have seen it believe, as I, this will be a wonderful breeder for it has inherited much of the width associated with iris of Dominion heritage. Les is "hot on the trail" of other colors, including green, and his "work-shop" is very interesting. I brought to my fields half a dozen of his new seedlings to trial and appraise and I feel here is a man succeeding in his hybridizing.

Last spring Dr. Durrance drove to Utah and together with Dr. Moody and Roy Rogers I returned to my birth-state (Colorado). Dr. Durrance and I drove to visit in Colorado Springs, with Dr. and Mrs. Loomis. I had met Dr. Loomis in 1950 on our return from the Sioux City Convention, and admiration turned to immediate kinship and love. Dr. Loomis has worked quietly, alone, and among his own things - exploring many color fields. He was the first to breed shell pink color in iris, and his Morocco Rose is undoubtedly responsible for the flamingo pink color that later came to the remarkable hybridizer David F. Hall. That Dr. Loomis has been rewarded with success and appreciation is known. His Elmohr having won the supreme award of the Dykes Memorial Medal. But a great many of his worthy seedlings have never been introduced, nor will be, since Dr. Loomis is a perfectionist and probably would never introduce an iris since he is interested only in watching advancement. He does, however, admire and like some of his seedlings and one he has liked (as have a great many others) is Blue Throat that I am introducing for him this year. The iris has some distribution due to the generosity of this man since no one may visit him without leaving with some of his seedlings. So he desires the iris be introduced at a modest price that a great many others may also own and enjoy it. A sidelight on the sense of humor of Dr. Loomis. In 1950 when I introduced myself (he was blooming *Pink Formal* for the first time) he immediately said, "Your *Pink Formal* is wonderful." To which I replied: "Well, you are the grandfather". With a sly twinkle in his eye and a characteristic nod of his head he retorted: "Well, that's it—we do all the work and you fellows get all the glory". And this year when I cut and carried a 40-inch stalk of Swan Ballet (a stalk, by the way cut from Mrs. Albright's garden) to be opened in water in the Loomis home he (upon looking at its opening bloom) said, "It is magnificent" - again I said, "Well, you are the grandfather. I get my best things by using Loomis iris!" He replied, "Well, maybe you do -1 don't — you must know how to use them." But he gets wonderful things, and the world will long enjoy a great many of these that have been introduced and more to follow. Dr. Loomis will never stop "spreading pollen" as long as he is able to get out into his garden. And long may he live! Such gracious people as he and his wife and lovely daughter (a visitor while we were there) make you know how wonderful and rich the experiences of life can be.

Melba Hamblen of Roy, Utah, (a suburb of Ogden) started hybridizing about 1949, and if I needed a "shot in the arm" or renewed enthusiasm I got it last year when viewing her seedlings in their home garden for the first time. Previously Melba had brought buckets of cut stalks for me to see, and there had been some lovely iris, but this year she seemed to have "hit the jackpot" and of some of her crosses I will write in the hybridizing hints. She is another "unorthodox" pollen spreader, but one who is quite scientific. In fact anything she undertakes she studies. I believe she has read (and owns) most of the books on plant breeding. She is now experimenting with radiation to change the chromosomes (or count) and if she has as much success with this as she has had by the normal processes we can look for great things from her. Anyway, she has let me co-list her 1956 introductions — all of which are lovely. I'll give you her address, too, in event you would like her catalog or that you might be in the vicinity of Ogden during the blooming season (end of May, first of June). Mrs. Hamblen was the first president of the (Ogden area) Rainbow Iris Society and a good president she made. They staged their first show last year (following a hail storm) but undaunted the show went on and was a great success and Mrs. Hamblen won the seedling award on a seedling out of Palomino x a sister to June Meredith (again grandpa was proud). She also had best commercial display.

And finally Uncle Tell's offerings which you will find in the pages of 1956 introductions. My descriptions of them should be adequate.

And for your loyalty and friendship I thank you all. It is not humanly possible for me to acknowledge all the correspondence that comes to me, although I try to answer the pertinent mail as quickly as possible and to get your orders out when you want them. Nothing is more irritating than to receive plants out of season for that region. I realize plants do better when established and that very often during the summer customers have planned vacations and expect to be away and if specified dates are given I try to fill the orders accordingly. If at any time you have cause for complaint please write me. I'd rather hear about it and try to make adjustment than to lose you as a customer and friend.

Best wishes and happy gardening.

As ever, "UNCLE TELL".

My Iris Patch

My iris patch has not done much to bring me world acclaim.

No seedling has been fine enough to register and name.

As far as money matters go I'm deeply in the red,

But there are many other ways where I might be ahead.

A rather wealthy woman comes out to see my flowers,

She's smart enough to look around and see the "wasted hours;"

And once she asked me if my wife had patience with my folly,

Yes, I could look her in the eye and say, "she did, by golly."

Her husband, rather recently, had such a heart attack,

They had him in the hospital, and flat upon his back.

It seemed there for a week or two, they thought that he would die;

You see, he is a businessman, but younger far, than I.

And then there are the friends I've made, all scattered everywhere,

I don't know what they look like, and I never even care;

We just write notes from time to time about some iris plant,

How we get seed to germinate, or maybe how we can't.

I don't know much of chromosomes—I'm not too scientific,

But when the seedlings start to bloom, my interest is terrific.

It's hard to wait for day to come, to see what may be out,

Sometimes I take a flashlight and try to peek about.

Yes, after the long hours we've spent to water and to weed, The fun in seeing all the flowers is really joy indeed.

A lot of you will understand, I don't need to explain,

Once bitten by the "iris bug," all cures are quite in vain.

I putter in my iris patch and let the time roll by,

And hope to keep right on this way, until the day I die.

Walker Ferguson, R. 2, Box 20, Escondido, Calif.

You will see Mrs. E. R. (Twyla) Olmstead has drawn a few more SQUIGGLES for our enjoyment. We had a flood of letters from fanciers all over the world with compliments and words of appreciation for the pleasure these humorous little "characters" had given them. Quite a few asked for Twyla's address for they wanted to tell her personally how they enjoyed her sketches. I am not sure I was able to write to each one (moving as we did to our new fields last summer) so if you want to drop her a note this year I'm sure it would make her very happy. Her address is 121 Williams Ave., Kelso, Washington.

1956 INTRODUCTIONS

ANYTIME (Mrs. Emanuel Cavagnaro, Memphis, Tenn.). M.-L. 45-50 inches. (Alba Superba x Lady Mohr). Large, wide, flaring white with pale chartreuse lines at hafts. The Mohr-shaped flowers are heavily substanced and of special interest to hybridizers since it is one of the first seedlings resulting from the use of Lady Mohr pollen. Pods easily. Should be a wonderful breeder for Onco-blooded hybrids as well as breeding to pure tall bearded plants. H.C.

BLUE THROAT (Dr. P. A. Loomis, Colorado Springs, Colo.). M.-L. 38 inches. (From long line of Loomis seedlings—probably involving Purissima.) Whether one calls this a light blue or a blue-white is immaterial for it is a lovely flower. The blue-tipped beard adds charm to the flower and should be useful to breeders working for white or blue iris with blue beards. The flower itself has poise and delightful shape due to the dip, or wave, in the flaring falls. Growing qualities are ideal for it blooms and increases consistently. Dr. Loomis wants it introduced at a modest price to make it available to as many growers and breeders as pos-

CONTACT (Hugo Wall, Wichita, Kans.). M. 38 inches. (Casa Morena x Solid Mahogany). A complete red self save for the yellow beard. This is a rich, clean flower without haft markings, or the purple influence seen in so many of the reds. A large flower displayed on a perfect stalk, well branched. We are anxious to see the seedlings this might produce when used with Defiance, Crescendo, Trim, Deep Maroon, Young Brave, Bang, etc.\$15.00

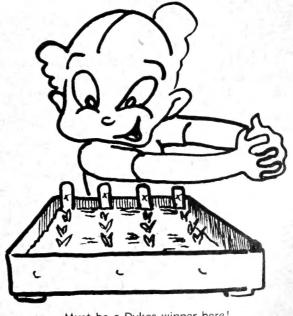

CREAM AND TANGERINE (Muhlestein). M.-L. 36 inches. (48-73 D: (Gold Ruffles x Chantilly) x (Pink Fulfillment). Light peach-yellow self with a peach-tangerine beard. The flowers have a tendency to the new lacing and with this breeding should produce laced and pink seedlings with regularity. No. 51-131. Net \$15.00

CUTIE PIE (Willis Madsen, Provo, Utah). M.-L. Height 36 inches. (Ruffled Gem x Chantilly). Aptly named we know this "cutie pie" will grab your heart-strings even though you may not be interested in the lacing it undoubtedly will pass to its children. A complete self of light wisteria violet with lemon-yellow beard and heart. A real charmer. No. 6-50-53A. Net\$20.00

DOROTHY KING (H. Senior Fothergill, London, England). E.-M. 36 inches. (Helen McGregor x Blue Ensign). Large, beautifully formed lavender-blue with attractive yellow beard. Described in the 1955 Year Book of the British Iris Society, page 25. With two Dykes Medal winners for parents it should prove a wonderful breeder for good blues and whites and bluebearded seedlings when used with things like Blue throat, etc. Selected for Trial at Wisley, 1955. Net**\$20.00** DR. WANLASS (Dr. Wm. L. Wanlass). M.-L. 32 inches. (Chantilly x Chivalry). Together with Mrs. Wanlass and her daughter we decided to name this beautiful iris in memory of its breeder. Surely a fitting monument to the other accomplishments that will live in the hearts of man for all time. As an educator he was greatly beloved and honored by all who were fortunate enough to know him. That he particularly liked this iris, we know. Surely this first iris to be introduced from his hybridizing will join the ranks of the truly great breeders for with this pedigree it cannot be other than a good parent. Dr. Wanlass should be most useful for breeding, ruffling, lacing and for adding these qualities to the blue, violet and purple class and may, also, be of value for pinks and their by-products. A delightfully ruffled mediumviolet self, smoothly finished hafts and lemonyellow beard. Net\$20.00

GAIL (Mrs. Ray Jensen, Logan, Utah). M.-L. 32 inches. (Dolly Varden x Apricot Glory). In the same color range as Top Flight. This is the finest orange or apricot-colored iris we have seen. The flowers are large, wide, smooth, beautifully ruffled and possess great substance. Only a few to release this year. Net\$35.00

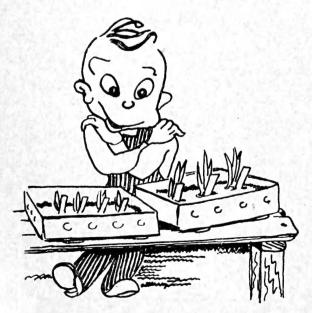

GRAY MOHR (C. J. Paul, Salt Lake City, Utah). E.-M. 36 inches. (William Mohr x No. 18: (Alta California x King Midas). Yellowish-grayedchartreuse, falls flecked olive-brown. Only those who have seen I. gatesii will realize how much this resembles its exotic oncocyclus grandparent. It certainly is a throw-back, and as such could be a very useful breeder. As large as I. gatesii and odd rather than beautiful. It resembles another Wm. Mohr seedling of Dr. Loomis' which he calls "Leopard Mohr" Fast of increase. No. 49-3. Net\$10.00

Must be a Dykes winner here!

1956 INTRODUCTIONS—Continued

INKY BLUBEARD (Luella Noyd, Wenatchee, Wash.). E.-L. 36 inches. (Black Forest x Storm King). Near self of deep black-purple of good form and heavy substance. The blue beard gives the flower a most unusual and interesting appearance. Pleased, we are, to co-introduce with Mrs. Noyd. Scarce. Net\$25.00

It could happen here

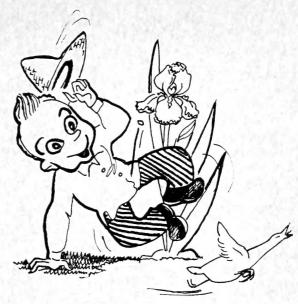

MONIQUE (William J. McKee, Worcester, Mass.).
L.-M. 38 inches. ((5010: (4901: Fairday x Fairday) x Fairday) x ((4901 x 5016 sister seedlings from (Fairday x Fairday). Wide yellow amoeana with white standards and clear medium-yellow falls that are nicely ruffled. Surely an interesting inbred pedigree. Should be highly useful with Mrs. Stevens', Wills' and Mr. Brummitt's iris in this color range, as well as with pinks, and normal violet and white amoeanas. Those familiar with Mr. McKee's work rate this one of his very best. No. 5229.

TAHOLAH (J. M. Gibson, Porterville, Calif.). M.-L. 36 inches. (145 A x Firecracker). Creamy-yellow plicata of good size and superb substance. Standards of a creamy-white center with light shades of dusky rose intensifying to tips-base of standards yellow. The deep dusky rose markings around the falls (and through their center) lighten with age and as the flower continues to grow after the first day-making the flower even more attractive than the freshly opened, darker-marked flower. A dependable grower, producer of large rhizomes and attractive spiral, green, foliage. Truly a beautiful and novel plicata. Not easy to pod, but a wonderful producer of quality when induced to seed production. The name is Indian mean-'Village by the sea". We are pleased to be co-introducing this fine iris with Cooley's Gardens of Silverton, Oregon. Net\$25.00

YOUNG BRAVE (Les Peterson, Salt Lake City, Utah). M.-L. 34 inches. (Happy Days x Depute' Nomblot) x (Red Waves). Big, bold, vigorous looking "Young Brave", indeed. Rich, smooth, brown-toned red clearly showing its Dominion heritage. Heavy, well branched stalks to display the colorful blooms without going down in the "war dance" (wind or elements). H.C. Award under No. 53-23. Net\$20.00

MARGARET ALBRIGHT'S BORDER IRIS

YUM-YUM (Sister to Lemon Drop). Rich, smoothly colored salmon pink with rounded, perfectly flaring, falls with superb substance. Height same as Lemon Drop. Net\$10.00

Yipie, this is it!

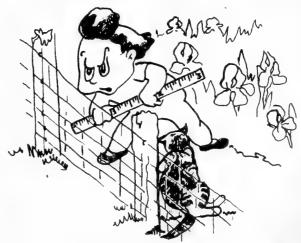

Co-Introductions from Mrs. J. R. Hamblen, MISSION BELL GARDENS 2778 West 5600 So. Roy, Utah

TALL BEARDED IRIS FOR 1956

선물이 가게 없는데 그렇게 된다.	
ADMIRATION (K. Smith '46) ML. (Aubanel x X-76) x (Chosen x Yellow Glory). Everyone admires this impressive clear yellow. H.M.	AMANDINE (G. Douglas '46). ML. (White Prince x Caroline Burr.) Wide, full cream. A.M. and President's Cup '48
ADORNMENT (Milliken). M. 30 inches. Crisp, tailored violet adorned with a lovely blue	AMAZON TAN (Hill-Son). M. (Prairie Sunset x Hill sdlg. of Sandalwood.) Beautifully formed, flaring, golden tan. Net\$1.50
beard. Net	AMBER GEM (Salbach '46). EM. Huge chestnut and gold blend. H.M. '47\$1.00
King x Sable.) Large, well formed, tall, dark purple. Fine grower, good parent. C.O.C. '47	AMELITA (M. Albright '54) ML. 36 in. (Amigo x Melitza.) Neglecta of unusual quality. It undoubtedly has an upset number of chromo-
AHMED AGA* (White '53) E. (Much onco blood.) 14 in. Lavender standards splashed violet, veined gold. Falls cream-buff with chamois edge. Brown-madder signal\$5.00	somes
AIRY GRACE (Stevens '47). EM. 36". (Sdlg x Tiffany.) Silken crepe de chine cream\$1.00	AMULET (Henry Sass '53). EML. (Matula x Prairie Sunset) x (Rainbow Room). Gleaming
AIRY MISS (J. Linse '53). M. 26 inches. (Ormohr x Matterhorn.) Border iris of rich clematis or	chamois with hints of Rainbow Room's coloration. A ruffled flower of substance\$3.50
red-violet, with faintest "Mohr" veining. \$4.00 ALADDIN'S WISH (Murawska '45). M. (Buechley Giant x Pluie d'Or.) Unusual! Blue brushed gold \$.75	ANATOLIA* (Craig '49). M. (Tiffany x Los Angeles) x (Capitola). Onco-patterned light redviolet to lavender. Slight signal patch at tip of beard. Very vigorous
ALBA SUPERBA (J. Sass '43). ML. (Snowking x Happy D. sdlg. Huge white. H.M. '43\$.75	AND THOU (Graves '42). M. (Purissima x Nene.) Large blue-white. Fine parent for whites with blue beards, and blues. H.M. '42\$1.00
AL BORAK (DeForest '52). M. 36 inches. (Her Grace x Prairie Sunset) x (Copper River). Wide, horizontal-flaring brown with strong character, H.C. '49, H.M. '53	ANTHEA (Corey '53). M. (Pink Salmon x Pink Formal.) Semi-flaring salmon-pink that makes an outstanding garden clump. H.C. '51 \$7.50
ALDURA (C. Larsen '43). EM. (Don Juan) x Titan x San Francisco) x (Wasatch). Beautifully formed, heavy substanced white plicata. Re- markable parent. Top quality! H.M. '47\$1.00	ANTIQUE CHESTNUT (Lyell '51). M. (Burning Bronze x Garden Magic.) Wine standards, pansy brown-red falls. Impressed us very much with its rich coloring and all-around good qual-
ALGIERS (Bickle '53). M. (Mulberry Rose x Prairie Sunset.) Non-fading rose blend with brushing	ity\$2.00 ANYTIME (See Introductions)
of chocolate at hafts. Canadian Seedling of the Year, 1952	APEX (Tompkins '47). ML. (Garden Glory x Jasper Agate.) Doing wonderful things for Tompkins in his new line of reds. Will prove
van.) Huge garnet-brown. Extremely fragrant. \$5.00	of remarkable worth in breeding for reds. \$2.00
ALICIA (Rawlins '48). EM. (Great Lakes x Gloriole.) Tall, stately blue with the best qualities of its two great parents Wonderful blood here for blues and white\$2.00	APRICOT GLORY (Muhlestein '51). ML. (46-113; Golden Eagle x Hall's 4024) x (Gay Orchid). Smoothly finished light apricot, or salmon, with deeper hafts and self beard. Apricot Glory is one of the most exciting new parents. Its
ALLINE ROGERS (Kleinsorge '50). EM (Cascade Splendor x Daybreak.) Huge tan blend. H.C. '49; H.M. '51	seedlings range in colors from white with red beards through various shades of pinks, sal- mons, apricots with orchid undertones, and the real break—pure oranges. It produces much
ALTAMOHR* (C. J. Paul '48). ML. (Wm. Mohr x Alta California.) Lovely flaring violet-orchid. Sets seed. Blood for plicatas and yellow. \$1.00	richer, deeper colors than itself with quality blooms and substance. Not quite as deep in color as the picture in this catalog, but a lovely
ALTAR LIGHT (Opal Brown '54) ML. 40 in. (Gold Ruffles x Alpine Glow.) Glorified Gold Ruffles (I can say this) in a very large, wide, ruffled, heavily substanced flower. Color is a light buff-yellow, shaded lighter toward center of falls. Hafts heavily lined dark amber which give the flower its strong personality. Destined to go places in popularity as well as a breeder. H.M. '54. Net	flower nevertheless. H.C. 49, H.M. '51\$4.00 APRICOT SUPREME (Tompkins '51). M. ((Spring Maid x Far West) x (SQ 73 x Hall 42-05)) x (Pink Salmon). Very tall, well branched apricotsalmon of good size. H.C. '50, H.M. '51\$5.00 APRIL EVE (Tompkins '55). M. 38 inches. travaganza x Wabash). Said to be a truly magnificent amoeana. Makes small rhizomes. H.M. '54. Net	throat, a fancy
CAPE BON (Tompkins '45). M. (Aztec Copper x Veishea.) Red with copper undertones. Back of Tompkins' new reds — recommendation enough for its use for red breeding. H.M. '45	CAROLINE BURR (K. Smith '40). M., 38 inches. (Easter Morn x M. M. Lassilly.) Large cream with light greenish cast. Easy parent, and seed germinates well. May be useful for greens and Amoeana-neglectas. A.M. '42\$.75
CAPELLA (H. E. Sass '50) ML. 36 in. ((Snowking x recessive white 144-38) x (Ola Kala)) x (Ola Kala x Ella Callis). Very large rich yellow	CAROLINE JANE (DeForest '51). M. (Her Grace x Tiffany) x (New Hope.) Very large, wide, ruffled blue and white plicata of exquisite charm
CAPITOLA* (Reinelt '40). EM. (Wm. Mohr x Ib-Mac.) Larger, better-formed Wm. Mohr without quite so much pattern. Pollen highly fertile and very useful to bring Onco blood, and type, into the tall bearded class. A.M. '50. Net. \$1.00	and proportions. H.M. '51
CAPTAIN FROM CASTILE (DeForest '51) EM. 38 in. (Vision of Mirza x Firecracker.) A large yellow plicata with brown stitchings and brushings. H.M. '52	CASA MORENA (DeForest '43). M. (Morning Splendor, Germain Pertheus, Alta Calif., Rubeo, Grace Sturtevant) x (Prairie Sunset). Lovely burnt sienna and chestnut. Blood for blends, reds and even plicatas. A.M. '46\$1.00
CAPTAIN'S LADY (O. Brown '55). ML. 36 inches. (2F: Hit Parade x Pink Formal). Plicata with tangerine beard. Not unlike New Adventure and the two should make interesting parents. H.M. '55	CASCADE SPLENDOR (Kleinsorge '45). ML. (Mexico x Goldbeater.) Ruffled pinkish-apricot blend. Proving a fine parent for blends, rich yellows and variegatas. A.M. '47\$1.00

CASCADE ROSE (Kleinsorge '53) EM. 40 in. (Rose Splendor x rose sdlg.) Bright rose blend with golden-brown hafts and extra heavy rich gold beard. A beauty
CASCADIAN (J. Linse '52). E-M, 36 inches. (Snow Flurry x Cloud Castle.) Very wide ruffled white with greenish cast through center of falls
CASINO (G. Plough '55). EM. 40 inches. (William Mohr x Firecracker). Self of rosy-mulberry with Mohr veinings
castle rock (Loomis '52). M. (Blue Shimmer x sdlg.) Large, impressive blue and white plicata with the blue blaze through center of falls. H.M. '54
CATHEDRAL BELLS (M. D. Wallace '53). M., 38 inches. (Hagen Blend x Overture) x (Golden Spangle x Pink Tower). Tall, wide light pink with serrated edges. Falls flare horizontally. Although the color is light it is of a definite pinkness. It has such quality that it is sure to make a very fine parent. H.M. '53\$7.50
CELESTAR (C. Larsen '50). M. (((Los Angeles) x (Don Juan x Titan)) x (San Francisco)) x Aldura))) x (Tiffany). White with flush of lavender-purple on one side of the falls. The buds are flushed with this same color—giving them an unusual effect. To retain the color the flowers should be picked as soon as open—otherwise the color fades away leaving a white flower. H.C. '49
CENTURION (Wills '50). EM. (Hindu Queen x Tobacco Road.) Burnished brown. H.M. '50\$2.50
CHALLENGE (Stevens '50). EM. (Inspiration x Caribbean Treasure: Miss Calif. x Cedar). Huge rose
CHAMOIS (Kleinsorge '44). M. (Mexico x To-bacco Road.) Stunning light golden-tan. Chamois and Amazon Tan lead this color class. A.M. '48
CHAMPAGNE VELVET (H. E. Sass '55). M. 36 inches. (Long line involving Orloff, Tiffany, Aleppo Plain, Mme. L. Aureau, Bertha Gersdorf). Satin white plicata bordered with one half inch bright violet put on with minute dots. Net
CHANSONETTE (Tompkins '48) M. 40 in. (Sierra Snow x Sib. to Alba Superba.) Large, rich orchid faintly flushed lemon at hafts. Net.\$1.00
CHANTILLY (D. Hall '45). ML. (Maiden Blush x pink sdlg.) Very heavily ruffled orchid-pink blend. Produces this ruffling in many of its seedlings, giving them great vigor as well. A.M. '47
CHAR-MAIZE (D. Lyon '49). M. (Snow Flurry x Aztec Copper.) Rich yellow with strong undertones of chartreuse. Wide, full flower that is stunning as well as different. Will undoubtedly be a great breeding iris. H.M. '49, A.M. '52.

- CHERIE (D. Hall '47). E.-M. (42-07: Golden Eagle x 39-62) x (Fantasy). Flaring light pink with good form and substance. Will be a fine breeder. A.M. '49, Dykes Medal 1951....\$2.50
- CHERRY FALLS (G. Douglas '53). M.-L. (Extravaganza x Paillaisse) x (Extravaganza x Wabash). Delightful border iris with yellow standards and red falls. H.M. '53. Net....\$6.50
- CHINOOK PASS (Norton '50). M., 36 inches. (Sylvia Murray x Gloriole.) This gorgeous blue has captured all the charm of each of its parents plus something else. Falls have a light yellow area at the hafts and toward center, beard tipped white. H.M. '51.......\$1.50

- CLARA B. (Muhlestein '52). M-L. (Chantilly x 46-2F: Hall's 42-10 x SQ 72.) White with lemongold border on its heavily laced standards and falls. A superb breeder for ruffling (lacing). Produces some pinks and their by-products. A charming flower......\$4.00
- CLAIR DE LUNE (Whiting '55). M.-L. 36 inches. ((Purissima x Matula) x (Gilt Edge)) x (Glad Tidings). Wide, tailored cadmium lemon bicolor. Standards deeper as are hafts.....\$15.00
- CLASMONT (Morris '49) E.-M. 36 in. (Edward of Windsor x V 21.) Salmon self......\$5.00
- CLEAR SAILING (DeForest '50). M. (Tiffanja x Coritica.) Flaring clean lemon-yellow. Absolutely stunning. Will be a superb parent for this color and plicatas. H.M. '50......\$2.50

CLEO (Murrell '41). M. (Pervaneh x sdlg: Moonlight x Bruno.) Unusual is this large satiny Chartreuse-green. Deliciously scented. Will be a useful parent for "greens". 36 inches\$2.00
cliffdell (L. Norton '52). M., 38 inches. (Alexia sdlg. x Cascade Splendor.) Crinkled edges of both standards and falls in a brown-gold blend with orchid center of falls\$2.00
CLIFFS OF DOVER (O. Fay '53). M. (New Snow x Cahokia.) Superb heavy-substanced white. H.M. '53. Net
cloth of GOLD (Whiting '45). M. (Golden Hind x Golden Spike.) Tall, rich yellow of quality and always a good performer. A.M. '50\$.75
CLOUDCAP (DeForest '50). M. (SQ 72) x (6-44: (Salar x Sandia) x (Prairie Sunset)). Huge light pink. Great parent. H.M. '51, A.M. '53\$4.00
CLOUD CASTLE (Graves '44). M. (Sensation x Gloriole.) Huge light lavender-blue. Superb parent for blues and whites. A.M. '49\$.75
CLOVELLY (Tobie '40). M. (Easter Morn x Rose Dominion.) White sea-foam green. May be useful in a green breeding program\$.50
COCK PHEASANT (Whiting '51). ML. (Baghdad x Garden Flame.) Rich tapestry red with tantalizing overlay of terra cotta on falls. Blood for reds!
COGNAC (Whiting '51). L. (Prairie Sunset x Veishea.) Glowing ambertan self. 40 inches tall. Splendid blood for breeding tans, browns and blends
COLONEL PRIMROSE (DeForest '51). M. (Ola Kala x Tobacco Road.) Tall, clean lemon-chrome yellow with flaring falls and domed standards. Fine blood for blends, browns and deep yellows
COLONIAL DAME (G. Douglas '50). M. 36 inches. (Billet-Doux x Great Lakes). Slightly ruffled light blue of unusual quality and charm. Blood for good blues and whites. H.C. '49\$2.50
COLORCADE (Tompkins '52). M-L., 37 inches. (Veishea x Bronzed Copper.) Deep copper-orange and rose-red blended into a brownish red flower with blue flush in falls\$3.00
COLOR CARNIVAL (DeForest '49). EM. (Spindrift) x 6-44: ((Salar x Sandia) x (Prairie Sunset)). Pink with bold dashes of purple on falls. Produces quality pink seedlings. H.M. '50 \$2.50
COLORGLO (Schreiner '53) EM. 36 in. (Idanha x Rainbow Room.) Lovely, colorful blend such as one might expect from this cross\$5,00
COLOR SERGEANT (H. F. Hall '49). ML. (R-58 x R-59.) Large, wide, ruffled red on tall 4-way branched stalks. We think it has a very good quality both as a breeder and garden subject. Limited stock. Net\$3.00
COLOSSAL* (Marx '46) EM. 38 in. (Wm. Mohr x El Capitan.) Huge violet of easy growth.

COLUMBIA (Tompkins '51). M. (Sister to Courtesy)
x (Anabel x Narain.) Large wide, rich deep commanding blue. H.C. '51. H.M. '52....\$7.50

CONSOLATION (Tompkins '50). M. (Blue Shimmer x Great Lakes.) Beautifully finished light blue. Very large of good substance. One of the best of this color we have seen.......\$1.50

CONTACT (See Introductions)

in. (Salmon Shell x Pink Fulfillment.) Very large, wide, laced peach-pink on heavy ramrod stalks. H.C. '53. No. 51-51D.......\$20.00

cool LEMONADE (Muhlestein '47). E.-M. (Electra x Bonanza.) Cool and refreshing as iced lemonade. A complete self, even to the beard. Starts the tall bearded season. Neither large nor tall, but so charming and clean we feel sure it will become one of your pets...\$.75

x Sukey of Salem.) Glowing henna-copper. Stunning	COURTESY (Tompkins '50). M. (Blue Shimmer of Lovely Day) x (And Thou). One of the top ranking blue-whites with a heavy blue beard Net
copper canyon (Tompkins '50). ML. 38 inches. (Arab Chief x Tobacco Road) x (Copperclad). Large flaring copper, deeper at throat	COURT HERALD (Stevens '52). M., 38 inches ((Golden Majesty x Golden Hind x Firelight)) x ((Golden Majesty) x (Naranja x Redmayne)) Vibrant, rich, burnished gold
COPPER CASCADE (Kleinsorge '40). M. (Treasure Island x Far West.) Wide, rich brown. Net	COURTIER (D. Hall '47). EM. (42-10: Golder Eagle x 39-62) x (42-05: 40-34 x 39-62). Deep pink color. One of the finest parents in this
copper gold (H. F. Hall '52). M. (Yel. sdlg. x brown-tan sdlg.). Gold-copper blend\$4.00	color class to date. Net

white and old rose fancy plicata. One of

- GENTLE FLORENCE (C. Taylor '47). E.-M. (Snow Flurry x Violet Symphony.) Good blue-white with better stalk than its parent S. F. Useful blood for blues, violets and whites. H.M.
- GIBSON GIRL (Gibson '50). M. Rebloomer. (Madam L. Aureau x Tiffany.) A lovely plicata that is a SURE rebloomer. Net.....\$1.00
- GILT EDGE (Whiting '41). M. (Happy Days x Matula.) Yellow bi-color. Falls have light area in falls. Proving a dramatic parent for many colors\$.75
- GINGER (Schreiner '53) E.-M. 36 in. (((Bryce C.) x ((P. Sunset) x (Aubanel x 38-36))) x Casa Morena). Sparkling ginger-tan or brown. Top blood for this color, blends, coppers and reds.
- GLADY'S MONCRIEF (Aylett '44). E.-M. (Oregon Sunshine x Golden Hind.) Done in the manner of Pinnacle. Looked very good here last year and should be highly useful for hybridizing purposes\$1.50
- GLAD TIDINGS (Whiting '47). M. (Amitola x Copper Piece) x (Amaranth). Huge, wide waxlike yellow with horizontal falls. Net....\$1.00
- GLISTENGLOW (Muhlestein '49). E.-M. (Snow Flurry) x (Geneiveve Serouge x Mount Cloud). Very wide, heavy-substanced white. Enough ruffling and character to give it a strong personality. Branching rather poor, its only fault. H.C. '47\$1.00
- GLISTENING COPPER (Muhlestein '53). M.-L., 32 inches. (Sister to Utah Sunset.) Brilliant, gay, smoothly finished copper. A remarkable parent. H.C. '51.....

GLOWING AMBER (Craig '53) M. 36 in. (Joseph's Mantle x Rich Raiment.) Golden amber overlaid with a smoky umber and sepia. A true fancy. H.M. '54......\$10.00 GOLDBEATER (Kleinsorge '44). M. (Rebellion x Naranja) x (Far West). Richest yellow. Proven fine parent for blends and yellows, but should be equally good for red breeding. H.M. '45, A.M. '51......**\$.75** GOLD DUST (Salbach '52). M. 36 inches. (Yel. Sdlg. x Plic. Sdlg.). Bright yellow plicata flushed and dotted deep brown. Net....\$3.00 GOLDEN ALPS (Brummitt '55), M.-L. 36 inches. (Admiration x?). Very smooth, bi-colored yellow-almost an amoeana. Falls have a slight ruffle, giving it distinction. See front page color arrangement. Selected for trial at Wisley. GOLDEN BUTTERFLY (Austin '54). E. 20 inches. (Ola Kala x I. hoogiana). Yellow hybrid with white stripe down center of falls......\$6.00 GOLDEN CORONA (Crosby '55). M. 36 inches. (Lancaster x Daybreak) x (Pink Formal). Bright and clean yellow and white bi-color. Falls edged the yellow of the standards.....\$10.00 GOLDEN EPAULETS (Grant '46). M. 36 inches. (Sunday Best x Chosen.) On the order of Mystic Melody with deeper hafts. Should be most useful as a breeder for the "yellow amoenas." Net\$1.00 GOLDEN FLASH (Noyd '55). E.-M. 36 inches. (Midwest Gem x Heritage). Yellow with tangerine beard. This should produce laced seedlings. salmons, pinks and other interesting colors. GOLDEN HAWK (K. Smith '51) M. 40 in. (Cascade Splendor) x (1-53 x Spun Gold). Large and imposing medium yellow. Blood here for yellows, blends, creams, etc. H.M. '52......\$18.00 GOLDEN GLEAM (Miess '51). M. (Tiffanja x Tobacco Road.) Dandelion yellow self with lines in falls indicating its plicata blood. A very distinctive iris. H.M. '52......\$4.00 GOLDEN PLOVER (DeForest '50). M. 36 inches. (Calderilla x Tobacco Road). One of the most attractive golden-brown blends. H.M. '51.\$3.00 GOLDEN RUSSET (D. Hall '46). M. (Invictus x 38-52) x (Golden Eagle). Gigantic russet that will simply "stun" visitors when well grown. Fine blood for this color, yellows, pinks, and possibly reds and variegatas. H.M. '47..\$1.50 GOLDEN SHADOWS (C. Rees '52). M. ((Natividate x Happy Days) x (King Midas x Happy days)) x (sister.) Huge 6¾-inch blooms of warm white having an outpouring of gold through center. Should be great with yellow amoeanas. 40 inches\$4.25 GOLDEN SUNSHINE (Schreiner '52). M. 38 inches. A clear, pure, true yellow neither on the orange or lemon-toned side. A fine addition

GOLDEN SYMPHONY (Horton '44). V.L.- (Plura-

belle x Rameses.) This will close the iris sea-

son with a very colorful show. Yellow stand-

ards—lavender-blue falls.....\$1.75

- GOLDEN TWILIGHT (Tompkins '53) M. 38 in. (Cascade Splendor x Honeyflow.) Wide, ruffled, golden apricot blend. Great blood lines! .\$7.50

- GOLD SMOKE* (S. Clarke) E.-M. (Anita Catherine x?—probably Tobacco Road or related blood.) Very light golden russet with a slight suffusion of soft lavender below a most unusual broad tannish beard. Some ruffling and lots of substance make it unusual........\$5.00
- GOLD SOVEREIGN (Whiting '49). M. (Ola Kala x Rocket.) Simply stunning is this richest orange-yellow. Top blood for vivid colors in yellow, orange and possibly reds. H.M. '50, A.M. '53.
- GOLD TORCH (Muhlestein '55). M.-V.L. 36 inches. (Matula x Gold Ruffles) x ((Ola Kala x (Golden Majesty x Spun Gold)). One of the brightest yellows out. Could very well produce ruffled and laced things. Was No. 51-87......\$4.00
- GOOD AND PLENTY (O. Fay '52). M., 36 inches. (44-44 x 44-23.) A white, and a blue self from a single seed. Will sell either SEPARATELY. Each...........\$4.00 Both........\$7.50

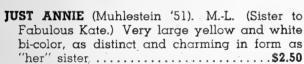

- GRACELLE (M. Albright '55). E.-M.-L. 36 inches. (Dreamcastle) x (Sister to Pink Salmon x Pres. Pilkington). Smooth blend of pinkish-lavender. A big, wide, laced and ruffled flower on heavy stalks not perfectly branched. We saw some most unusual seedlings from this lovely iris crossed with Pink Enchantment and Mary Randall. Sure to be a marvelous parent for many colors although it appears to be quite dominant. H.C. '54, H.M. '55. Net.....\$20.00
- GRACIOUS LADY (C. Taylor '52). EM. (Lake George x Great Lakes.) Large smooth blue with a delightful dip in the center of the falls. A grand pollen parent. 34 inches......\$2.00
- GRAND CANYON (Kleinsorge '41). M. (Treasure Island x Far West.) Rich plum and copper blend. Overlooked as a parent. Would suggest using Gypsy Rose, Cape Bon, Honeyflow, Casa Morena, Three Oaks, Dream Along, Sunset Road, Susitna Sunset. A.M. '44.....\$.60

GRAND MARSHAL (Milliken). ML., 40 inches. (China Maid x Chosen.) Odd yellow with brown tones. A big, full, semi-flaring flower. A remarkable parent for browns, tans, blends, yellows, and possibly pinks and red. Net \$1.00	Valley x Jane Phillips.) Ruffled pale blue, beard tipped white. With such breeding it cannot miss as a top-notch breeder. Net\$5.00
GRATITUDE (Snyder '50). EM. 40 inches. Rosy blue-bell self with light brown suffusion at the hafts. This hardly tells the story of an altogether distinct and delightful iris that will have wide appeal when it is distributed. A grand	(Damascus x Rocket) x Acadia x Damascus.) Richest lemon-yellow self including beard. Re-blooming tendency
iris. H.C. and C. of C. '49\$2.00 GRAY MOHR (See Introductions)	Narain.) Very dark blue-black. Highly valuable for "black" breeding. Stunning. H.M. '46. Net
GREAT DAY (Tompkins '53). ML. 36 inches. (Ebony Echo x Manana). Flaring, ruffled, rich glossy non-fading deep red devoid of haft markings. H.M. '53	GUSSIE (Corey '53). ML. (Chantilly) x Daybreak x Midwest Gem). Lacy-edged orchid with lemon beard\$10.00
GREAT LAKES (Cousins '38). M. (Dominion sdlg. x Conquistador sdlg.) Quality blue that has been widely used as a parent and with great success. Dykes Medal '42	GYPSY (Kleinsorge '45). L. (Rebellion x Naranja) x (E. B. Williamson). Wonderful variegata. Blood for this color, blends, reds and oranges. H.M
GREENBACK (Murray '55). EM. 38 inches. (Purissima) x (Gloriole x Caroline Burr). Big, wide, green-white with quite green buds. Should be very useful in a green program and must be	 GYPSY CLASSIC (DeForest '51). M. Nightingale) x (Prairie Sunset x Tobacco Road.) Stunning new Brown. H.M. '52
GREEN CHANCE (Murray '55). EM. 40 inches. (Appointee x Green Pastures). CHARTREUSE bi-color. The falls have more actual green than any other T.B. iris I have seen. As the	(Lamplit Hour sib.) x (Moonblossom x Wabash). Butter yellow standards, rich lavender falls
name implies it should be a good "green-chance" breeder	Three Oaks.) Tall, well branched, red-copper blend. Rich and wide parts; a top parent. We bloomed some lovely things from it x Miogem. Finest blood for reds. H.M. '49
treuse white. Should be highly useful for breeding toward greens or for creams, blues and whites. H.C. '48	HALLMARK (Hall '54). EM. 34 inches. (Two pink Sdlgs.). Rosy pink self with red beard. H.M. '54
GREEN IVORY (Muhlestein '53). ML., 36 inches. (Desert Song x sister to Greenglow.) Very large, wide ivory with greenish cast. Flowers so large they have a tendency to touch one an-	HALOLIGHT (Schreiner '53) ML. 42 in, (Alpine Glow x Gypsy Rose.) Self blend of soft buffton
other, but if used with Spring Romance, Char- Maize, Spring Sunshine, and other branched varieties, should produce good seedlings. \$5.00	HAPPY BIRTHDAY (D. Hall '52) EM. 36 in. (Melody Lane x Heritage.) Large, bright, full pink. H.M. '5., A.M. '54
GREEN MOHR* (Muhlestein '51). M-L. (Wm. Mohr x Chosen.) Strong greenish-chartreuse self—the falls having a slight lavender flush when first opened. Full "Mohr" shape. Will set seed. Won Seedling award Salt Lake City and C. of C. '50. H. M. '52	HAPPY HEART (Tompkins '53). ML., 40 inches. (Easter Gold x Ola Kala) x (Cape Bon x Sea Shell). Mr. Tompkins thinks this is as deep yellow as he has bred or seen. The flowers are broad and ruffled. It should produce wonderful yellows, blends and pinks
GREEN PASTURES (Heller '47). EM. (Old Ironsides x Oregon Sunshine.) Yellow-chartreuse self. Form could be improved and may be a difficult grower in some sections—especially	HAPPY MEETING (D. Lyon '55). ML. 36 inches. (Lovelace x New Hope). An altogether lovely, clean and charming plicata of ivory white bordered lilac. H.M. '55\$22.00
the mid-West, but of interest for hybridizing. Bluish-tipped beard. H.M. '47. Net\$1.50	HAPPY TALK (Mary Ollmann). ML., 36 inches. Elsa Sass x Coritica.) Flaring very yellow plicata, deep rosy-red edges\$2.50
GREEN WHISPER (Joyce Button '49). EM. (Matterhorn x Jake.) An off-white from two recessive whites from plicata breeding. It should produce plicatas and lemon-yellows\$2.00	HAPPY VALLEY (Miess '50). M. (Mountain Sky x Narain.) Lovely medium blue. Splendid breeding for blues—either dark or light\$2.50

HARBOR BLUE (Schreiner '54). M. 36 inches. (Jane Phillips x Quicksilver). A medium blue with lots of quality. Blood here for great blues and whites. H.M. '55	HELEN KENNEDY* (F. Kennedy '53). EM. (Snow Flurry x Luna.) Blue with a white beard. A wide, full flower. Should be most interesting to use with other Onco and regelia-blooded iris. Net
HARRIET BELLE RIGG (Ricker '54). ML. 40 inches. (Three Oaks x Caroline Burr). Light wisteria-violet with lighter area at tip of golden beard. Net	HELEN LOUISE (Lapham '52). M. (Barbara Luddy x Paradise Pink.) Deep salmon-pink, red-tangerine beard. H.C. '51\$5.00
 HARLEQUIN (Stevens '49). M-L. 32 inches. (Sdlg x Tiffany.) This bizarre plicata will find lovers of iris coming back to it again and again. Silvery falls flare and have a veining and dappling of chocolate and purple\$1.50 HAZEL REED (Craig '50). M., 40 inches. (Prairie Sunset x Sultan's Robe.) Henna-brown with golden undertones. Superb blood for blends, reds and browns. Net\$4.00 	HELEN McGREGOR (Graves '46). EM. (Purissima x Cloud Castle.) Superb light blue. Does fade in hot sun, but if planted in partial shade is magnificent. A wonderful exhibition flower, and will undoubtedly go down in history as a great breeder for blues and whites. Dykes Medal '49
HEADLANDS (Craig '50). M., 40 inches. (Acropolis x Destiny) x (Great Lakes). Looks to us to be a larger, taller, better branched Chivalry. Really very fine and commanding\$2.50	Snow Carnival x Cloud Castle). Pure white- not a touch of off color. Highly praised. H.M. '50
HEADLINES (Brummitt '54). M.LV.L. 36 inches. (Extravaganza x Louise Blake). A stunning addition to the amoeana-neglecta class. Standards have a blue cast when flower first opens, but fade to white shortly thereafter. A fine iris and a good one to extend the late season. Selected for Trial at Wisley (England). Net	Florence x Tobacco Road.) Rich hellebore-red brown. Perfection of form, substance\$10.00 HERITAGE (D. Hall '49). M. (Tally Ho x Courtier.) Deeper than Cherie. Produces tailored seedlings. H.M. '49, A.M. '51\$2.50 HIGH COMMAND (Long). M. (Eternal City x Louvois.) Very large brilliant, different, variegata.
HEART'S DESIRE (J. Wills '50). EM., 38 inches. (Copper Pink x True Love). Large, wide bitoned red. Could be useful for Amoeans with red falls, reds, yellows and coppers\$3.00	Splendid. A limited supply\$1.00 HIGH FASHION (See Introductions) HIGH HEAVEN (Plough '54) M. 38 in. (Snow
HEATHERLANDS (Craig '53) M. 38 in. (Joseph's Mantle x Royal Band.) Fancy heather and wood-violet plicata. Falls strikingly striated with white. Re-blooms in mild climates\$5.00	Flurry x Great Lakes.) Wide, heavily substanced quality light blue with blood to produce the greatest
HEATHER ROSE (D. Hall '50). M. ((44-41: (42-26: Gay Troubadour x Mandalay) x (Overture)) x (Courtier.)) The name describes the color—a large flower of quality. Will be a fine producer of many interesting colors in the new race of pinks, orchids and salmons. H.M. '51\$1.50	Castle.) Impressive is the word for this truly magnificent ruffled silky blue-white on 40-inch well branched stalks. The wide flowers will be beautiful in any company. A superb show specimen and can't miss as a breeder for blues and white. H.C. '51, H.M. '52

der iris about 30 inches tall. Producing wonderfully smooth blues and whites\$1.50 SKY TINT (Muhlestein '49). EM. (Sparkling Frost x Gloriole.) Slightly similar to Cloud Castle,	SOME LOVE (White '38). E. 12 in. (Polyhymnia x Jubilee.) Delightfully dainty violet and white oncobred. Net
but standards are very conic (closed). It is proving a remarkable parent with Sea Lark, other blues and whites. A really delightful light violet-blue. No pollen. H.C. '48\$1.50	SONG OF SONGS (Crosby '50). EML. (Gold Ruffles x Cream Gold.) Light yellow standards, white falls edged color of standards. All petals are edged with "chantilly" lacing and ruffling.
SLEIGHRIDE (Craig '52). EM. 38 in. ((Purissima) x (mesopotamica x Dominion)) x (Chivalry). Beautifully wide blue-white self. Great breeding material for blues and whites\$3.00	Easy parent both ways. We think it will prove a remarkable breeder for many colors, including shell pinks. For it is descended from Sea Shell and Gold Ruffles who's sister 44-67 was a shell pink break. H.M. '50\$1.00
SLICK CHICK* (Linse '54). M. 36 in. (Lady Mohr x Snoqualmie.) Smooth white with greenish midribs and buds. Fertile each way\$10.00	SOQUEL* (Reinelt '40). EM. (Wm. Mohr x Sunol). Early violet-blue. Rather easy to pod. Net.\$1.00

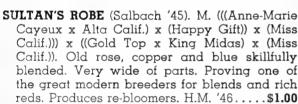

Flurry x Chivalry.) Ruffled blue-white with a most distinct and charming fragrance\$3.00
SOUTHWESTERN (F. Cook '53). M. 36 in. (Mexican Magic x Miogem.) As could be expected from such a cross this is a rich blend of purple, pecan brown, copper and rose. H.C. '52.
SPANISH FANDANGO (Kleinsorge '51). M. Taller, richer Mexico. H.M. '52\$5.00
SPANISH PEAKS (Loomis '47). EM. (Purissima x White Dominion sdlg.) x (sdlg.). Splendid white that is lovely when established. Easy grower. Most votes for A.M. '50\$1.50
SPARKLING BLUE (Grant '42). M. (Shining Waters x Aline.) Large flax blue. Net
SPELLBINDER (K. Smith '52). M-L., 34 inches. (Amandine x Gold Ruffles.) Oyster-white with under sides of petals naphaline yellow giving a chartreuse effect against the light. Petals picoteed, fluted and edged in bright yellow-gold. Well branched stalks carry the large flowers to perfection. Marvelous blood for creams, whites, greens, blends and possibly pinks
SPELLBOUND (Linse '51). M. (Tobacco Road x Prairie Sunset.) New beautifully formed red with golden overlay. Outstanding. H.M. '52
SPICE (Craig '53). M. 36 in. (Molten x Golden Perch.) Golden-tan blend with orchid blaze and a gold beard. Great blood for rich things in tans, blends, reds and yellows\$5.00
SPLASHES (Muhlestein '52). E-M., 34 inches. (Marx: Wm. Mohr x Sacramento) x (Aldura.) Mohr-type flower of violet with white splashes throughout. No two flowers splashed exactly alike. Novel and different. C: of C. '51\$2.50
SPORTING THOMAS* (Muhlestein '49). EM. (Sport of N. J. Thomas.) Very dark purple. Wide of parts. Most fertile pollen imaginable, even on difficult hybrid lines\$1.00
SPOTLIGHT (Schreiner '52). M., 40 inches. Deep golden yellow with an almost deeper self beard and a distinctive narrow glint-line of white below beard\$5.00
SPRING MELODY (Miess '54). ML. 40 inches. Brilliant deep yellow self, well branched \$12.00
SPRING MOON (R. Goodman '52), E-M., 32 inches. Snoqualmie x Fay 44-57.) Gigantic flaring light silken yellow. Superb blood for creams, yellows and whites. Future assured for this attractive, smooth creation\$5.00
SPRING ROMANCE (E. Miess '49). EM. (Melitza x Narain.) Waxy cream-white with frosty overlay and heavy infusion of aureolin gold at hafts. Very heavy orange beard. Should be highly useful for breeding creams, blues and shell pinks. Won Gold Cup at the 1948 Hollywood show. H.M. '50\$2.00

- **SPRING SONNET** (DeForest '53). M. 38 inches. (From pink lines). White standards, creamy-yellow falls. Large and broad................\$10.00

- STAG AT EVE (Muhlestein '48). E.-M. (Chosen x Prairie Sunset.) Large russet-tan self sprinkled with gold dust. Some iris are wonderful breeders and produce quality seedlings. Stag At Eve is one of these—its brown seedlings are outstanding\$1.00

- STAR SHINE (J. Wills '49). M.-L. (Hermitage x Hernani) x (Song of Gold). Deep cream standards, falls white with faint blue in center and edged color of standards. In great demand. H.M. '49, A.M. '51..................\$2.50
- STATEN ISLAND (K. Smith '47). M. (The Red Admiral x City of Lincoln.) Tops in variegatas. Has blood for many colors including neglectas. H.M. '48, A.M. '51......\$2.00
- STEP UP (Muhlestein '52). M-L., 36 inches. (Madam M. Lassilly x Mist Glow.) A different amoeana. White standards, light violet falls. Difficult to pod but pollen is very fertile. Should be good on the new and larger amoeanas. A step up the ladder to better amoeanas. Crossed to Louise Blake gave Mrs. Crosby On Parade and several good amoeanas and neglectas.
- STORM WARNING (Schreiner '53). M., 36 inches. (Down East x Black Forest.) Large, imposing "black" from the blue-side. H.M. '54....\$7.50

STORY PRINCESS (Crosby '53). EM., 38 inches. (Snow Flurry x Cloud Castle.) Smooth silky finished light violet self devoid of any other mark or off color save the inconspicuous beard
STRATHMORE (Morris '49). M. (Edward of Windsor x Hall sdlg. V 21.) A lovely apricot-pink with tall, well branched stalks\$2.00
STYLISTA (Mitchell '50.) M. (Mitchell O-136 x Salbach 39-42.) Self white with yellow shoulders and strong yellow beard. Medium size, but a real charmer\$1.00
SUEZ* (Schreiner '43). EM. (Wm. Mohr x Mme. L. Aureau.) Violet and white—showing clearly its two parents. Good grower. Rather easy pod parent
sulgrave (Randall '52). ML. 40 in. Brownish rose standards, violet-brown at hafts, falls round and full and of a rich golden brown. A lovely blend; selected for trial at Wisley
sugarplum (Corey '53). ML. 36 inches. (Chantilly x (Daybreak x Midwest Gem). Soft orchidpink with horizontal-flaring falls. The whole flower is done up in a laced edge. Very charming and sure to be great with other laced things. H.M. '53. Net
SULTAN'S ARMOR (A. K. Edmison '54). M. 24 in. (Armour Bright x Sultan's Robe.) One of the richest and most charming border plants. A wide, beautifully shaped brown self with deeper colored hafts
SULTAN'S ROBE (Salbach '45). M. (((Anne-Marie Cayeux x Alta Calif.) x (Happy Gift)) x (Miss Calif.))) x ((Gold Top x King Midas) x (Miss

SUMMER SONG (Nesmith '51). M. (Sunset Serenade x Sequatchee) x (Bryce Canyon). Glowing orange-gold. Stuning. H.M. '52.....\$4.50

SUMMER SUN (Craig '51). M. (Berkeley Gold x Tobacco Road) x (Ola Kala x Cascade Splendor.) Very full, flaring, deep yellow. Superb blood for blends, yellows, browns, reds and coppers\$2,50

SUMMERTIME (Caldwell '49), M.-L. (Betty Nesmith x Jean Cayeux) x (Golden Majesty). Deep yellow. Wonderful blood for blends, oranges and yellows. H.M. '49...... \$.75

SUMMIT (Stevens '51). M. (Sister to Mystic Melody.) White standards, deep yellow falls.\$3.00

SUN LAKES (Suiter '51). M. (Blue Champagne x Sylvia Murray.) Top quality light blue with the shape of Sylvia Murray and the coloring of Helen McGregor, and the color holds. A breeder for blue beards and greens.... \$1.50

SUNNY RUFFLES (Waters '43). E.-M. (Gudrun x Jean Cayeux.) Nicely ruffled lemon-chrome yellow. Bred to ruffled things and Kleinsorge lines should give some unusual seedlings.\$.50

When does this happen?

SUNRAY (D. Hall '50). M. (41-45: Invictus x Spring Chimes) x (Floradora). Lovely formed yellow that will be highly useful for hybridizing many colors, including pinks.....\$1.50

SUNSET BLAZE (Kleinsorge '48) E.M. (343 x 333.) Deep red-flame-salmon. Simply stunning. Winner of the President's cup '49. H.M. '49, A.M.

SUNSET GLOW (H. F. Hall '53). M.-L. 39 in. Garnet brown with rich orange beard...\$5.00

SUNSET ROAD (Muhlestein '50), E.-M. (Prairie Sunset x Tobacco Road.) Rich brown blend useful as a parent with Sass, Whiting, Kleinsorge and Tompkins' lines. Net......\$1.00

SUNSET SERENADE (J. Sass '43), M. 36 in. Reblooms. (Golden Age x Prairie Sunset.) Listed again because of its re-blooming tendency. (Especially where small rhizomes fail to bloom in the spring will this variety throw some summer or fall bloom.) Golden tan blend. Blood here for yellows, blends and possibly pinks.

SUNSTONE (Whiting '53). M.-L., 38 inches. (Break of Dawn x Rocket.) Near self of orange-brown or brick-red\$1.00

SURRENDER (Tompkins '51). M.-L. (Lamplit Hour x Pink Tower.) White with canary yellow flowing from the throat onto hafts and outer edges of falls. Pink cast permeates the flower. Breeds tangerine bearded plicatas......\$5.00

set x Casa Morena.) Rich blend. Top blood for browns, reds and blends\$1.00	TANGO (H. E. Sass '54). M. 38 in. (Blue Shimmer x Azure Skies.) Heavily substanced large, rich blue. Semi-flaring, waved falls, strong stalks.
SWAGGER (Lothrop '53). M. 40 in. (Esquire x 44-9.) Darker Esquire with quality flowers of good substance	TARN HOWS (H. Randall '53) M. 36 in. (Alpine Glow x Melodist.) Self of Tobacco Brown. Selected for trial at Wislam
SWAN BALLET (Tell's '55). ML. 40 inches. (Spanish Peaks x? Prob. Azure Skies Sdlg.). Wide, ruffled, flaring all white including white-tipped beard. H.C. '54, H.M. '55. Net\$22.50	TECHNICOLOR (Whiting '50). M. (Garden Glory x Rocket.) Well branched, many flowered brown-toned red. Not a strikingly beautiful flower, but one that will go down in history as
SWAN LAKE (C. Benson '49). M. Birchbark x Great Lakes.) Crisp light blue self. Exceptional form and substance. First in seedlings St. Louis	a superb breeder for reds. Has already produced Defiance for Tompkins. H.M. '50\$3.50
'46 C.O.C. '48. Top blood for blues and whites	TEDEW (DeForest '54). M. 36 inches. Iridescent golden tan and "lime-green". Ruffled falls have a blue-lavender flush\$12.00
sweet GIRL GRADUATE (Vallette '55). EM. 36 inches. (Chantilly x 47-72A, sister to the parent of Pink Fulfillment). Creamy-pink with texture veining and a laced edge. Extremely heavy substance. Should be a great breeder. \$10.00	TEMPLE BELLS (D. Hall '52). M. (Fuchsia x Dolly Varden.) Deep apricot-yellow of good form and size. Will be a superb parent for many colors. H.M., '53, A.M. '54
SWEET MARIE (Muhlestein '51). EM. (D. Hall's 40-32: (35-40: Dauntless x Rameses) x Lullaby) x Sister sdlg. No. 40-24). Very large orchid with tangerine beard. H.C. '50\$1.50	TERRIFIC (McKee '54). M. 42 in. (Radiation x Fairday) x (Radiation). Large orchid-pink with tangerine beard. In the same general color-range as Mary Randall, but coarse
SWEET TALK (Tompkins '51). M. (Chansonette) x ((Rameses x Lullaby) x Moonlit Sea)). Heatherpink flushed silvery-lilac with faint creamy-lemon glow through the center\$1.00	TEXAS WAY (DeForest '54) M. 34 inches. (Black Orchid Sdlg.). Very large dark purple\$15.00 THE CAPITOL (A. Maxwell '44). M. (LaGloria x Gloriole.) Very large white with heavy orange
SYLVIA MURRAY (Norton '44). M. (Great Lakes x Shining Waters.) Beautifully formed light blue with delightful fragrance. Easy pollen parent. A.M. '49	beard. Queen of the Show Salt Lake City 1950. H.M. '46, A.M. '51
SYRINGA (Lowry '47). M. (Sister to Mount Herman.) Fine lilac-lavender. This and Lilac Lane almost stand alone in this color class. H.M.	(Helen McKenzie x Jane Phillips.) Classic white self receiving none but the highest praise. H.M. '54
'47 \$1.00 TABASCO (Craig '51). M. (Rich Raiment x Joseph's Mantle). Stunning big yellow plicata. Strikingly diffirent. Like paprika sprinkled over an omelet. H.M. '54. \$5.00	THE FRANCISCAN (Essig '47). M., 38 inches. (Involving: New Albion, Firefall, Rose Mitchell, Easter Morn, W. R. Dykes, China Lantern, Cardinal, Ambassadeur, Esplendido.) A dark purple of rather different and varied blood
TABU (Schreiner '54). M. 34 in. (Black Forest x Storm King.) This looks to be the blackest of the Schreiner "black" series. Nicely finished. H.M. '54	THE KNOCKOUT (Muhlestein '51). M. (Remembrance) x (Ming Yellow x Prairie Sunset). Rich yellow standards, falls lighter, brushed heavy yellow at hafts. Delightful in its charm and distinction. Will produce shell pinks when bred
TAHOLAH (See Introductions)	to them\$2.00
TALLY HO (D. Hall '49). M. (Fantasy x 42-46, sister to 42-10.) Shaded purple-fuchsia, tangerine beard, heavily striated, excellent form. Top parent for pinks and other new colors. H.M. '50	THE MAD HATTER (Lyon '51). M. (Ranger x Cordovan.) Deep rich mahogany red. Large and tall. With this blood it cannot miss being a superb breeder with Aria, Technicolor, Pacemaker and Burmese Ruby, to mention a few. H.M. '51\$4.00
Jean Cayeux) x (Fortune). Light bronze-tan self. A grand pedigree for breeding in these shades	THE ORIOLE (Schreiner '47). M. (Spokane x El Tovar.) Variegata with rich gold standards, blackish-maroon falls. Striking\$1.00
TANGERINE CREAM (Austin '54). EM. 32 inches. (Buffawn x Flora Zenor). Cream with tangerine beard. Standards lightly flushed pink\$2.00	THE PENGUIN (Goodman '48). M. (Madam L. Aureau x sdlg of Golden Eagle.) Unusual brownish-marked plicata. A little different
TANGIER (Whiting '50). M. 36 inches. (Matula x Garden Magic) x (Rocket). Deeper, more brilliant ROCKET. An eye-catcher in the garden. Net	blood. May give good plicatas to the pinks—some with Tangerine beards when bred to things like Pink Formal, SQ 72. Surrender and New Adventure

THE PIRATE (Lothrop '53). ML. 40 in. (Sis. to Esquire) x (Mother of Esquire x Red Sdlg.). Another fine dark purple from a hybridizer who specialized in this color\$4.00	TOP HAT (Schreiner '54). ML. 34 in. (Prob. Ve. vet Duck x Down East.) Large, flaring tailored black-purple. H.C. '53, H.M. '54\$10.0
THE SHOWMAN (Muhlestein '50). ML. (Arab Chief x Bryce Canyon.) Brilliant, wide, red-copper. Similar in coloring to Sunset Blaze, but blooms after it. Rather high branched. A wonderful parent. H.C. '48\$1.00 THE TANNER (Muhlestein '51). ML. (Fortune x	TOP SCORE (Salbach '48). M. Stunning new variegata. Yellow standards, orange-brown falls. Might be tops with Rocket, Orangeman Orange Gem, Mexico and Gold Sovereign for oranges or Staten Island, The Oriole, High Command or Black and Gold for variegates
Tobacco Road.) Flaring mustard-tan. Quite different to anything we have grown. A wonderful parent both ways, but should be bred to something with height. 30 inches\$2.50 THORWALD (Knowlton '55). M. 38 inches. (Prince	TOSCA (Benson '49). M. (Brunhilde x Gloriole Stunning ruffled lavender-blue with domestandards and wide flaring falls. Superb substance. Top blood, don't you think, for breed
of Orange x Redyen). Orange-tan self. Great blood for blends and reds	ing? H.M. '50
bacco Road. H.M. '51, A.M. '53	hafts. H.M. '48
Rose.) Striking brilliant rich coppery pink blend with blue flush in falls. Wonderful parent for blends and reds. A.M. '49\$.75	TOWN TALK (Lapham '54). M. 36 inches. (Drun Major x P. Cook 745). Big, wide bi-red\$20.00
THREE SIGNALS (W. Marx '54). M. 42 in. (Sky Chief x Los Angeles.) Violet with white area below beard. A fine addition to this class and will be useful for breeding with Mr. Wadland's Violet Grace and Pinafore Lass. Should throw fine blues and plicatas\$5.00	TRADITION (K. Smith '53). M. 42 in. (Snow Flurry x Sea Gull.) Ruffled, flaring medium lavender self. Well branched
TINTED PORCELAIN (Dr. G. P. Brown '53). M. 36 in. (Allumeuse x Snow Carnival.) Pastellavender self with porcelain-like finish. Could be highly useful for Amoena and Neglecta breeding as well for blues and whites\$6.00	touch of ruby-red flanks the cinnamon beard Tannish tones touch the standards and borde the falls. Unusual
TOAST AN' HONEY (Kleinsorge '53). M. 36 in. ((Mexico) x (Aztec C. x Prairie S.)) x (Cascade Splendor x Daybreak). Quality tan blend somewhat like Mexiglow. Great blood here for this color, blends, variegatas, yellows and possibly reds. H.M. '55	Katherine Fay.) Superb milk-white with white beard. Splendid for wonderful blues and whites. H.M. '50, A.M. '53
TOBACCO ROAD (Kleinsorge '42) EM. (Aztec Copper) x (Far West x Jean Cayeux). Wonderful break in the brown class, and proved a remarkable parent. Breed to tall reds for quality red breeding. A.M. '46	and white combination. Blood may be mos useful with the shell pinks. H.M. '50\$1.00 TREASURE CHEST (G. Douglas '53). ML. 40 in ((Soldano x China Clipper) x (Yel. sdlg.)) x (Ola Kala). A treasure-chest of brilliant saffrom yellow, with 12 or more buds\$6.00
TOLGA (McClanahan '54). M. 34 inches. (F2: Mary E. Nichols x Lady of Shalott). White ground plicata marked red-violet. Stunning\$10.00	TRELAWANY (Corey '53). M., 40 inches. (Syringo x Platinum Beauty) x (Cloud Castle). Silky blue lavender shelf. H.C. '52
TOPAZ (Waters '54). M. 38 inches. (Orangeman x Casa Morena). Brilliant, quality blend of hennabrown with yellow shining through. H.M. '54. Net	TREVA (DeForest '45). M. (Rio Oro) x (Sandal-wood x Amitola). Luscious golden aprico-blend. Wonderful blood for blends, oranges and possibly reds. H.M. '46\$1.00
ing, deep, rich, orange-apricot with the huge, long deeper apricot beard. One of Hall's very best and destined to be popular. Superb flaring form, and substance. H.M. '53, A.M. '55.	TRIFARI (H. E. Sass '53). M. 38 in. ((A. Plain x Imp. R. Pol.) x (Sib)) x Sdlgs. from complicated line). Bright yellow plicata with deeper markings toward hafts. Very unusual and distinct

TROPIC MOON (Stevens '50). EM. 33 in. (Magnolia x City of Lincoln) x (((Snowking) x ((Lagos) x (Lady Morwyth x Rangatira))). Flaring lemoncream. Net	UTAH SUNSET (Muhlestein '51). EM. (Honeyflow) x 46-16: sister to Sunset Road). The largest and smoothest blend we know. The hafts are so smooth we know it will be a boon to hybridizers. Its seedlings are very fine. Luscious in its smooth blending of onion-skin pink, buff and salmon tones. H.C. '49\$3.00 VALGANZA* (Brenan '53). M., 38 inches. (Ex-
TRULY YOURS (O. Fay '49). M. (44-43: ((Rameses x Far West) x (D. Hall's 42-35)) x (Zantha). Huge, unusual yellow and white combination with heavy ruffling. Rather anxious to see what this and Song of Songs will produce. Highly popular because of its size and distinction. H.M. '49, A.M. '51, Dykes Medal '53\$7.50	travaganza x Val.) New color charmer in a variegata with yellow standards and redpurple falls (Malvasia-grape) not unlike Pretender. A great granchild of an Oncocyclus, and it has Mauna Loa back of it twice which would indicate its great possibility of producing good amoeanas and neglectas\$5.00
TRYAGAIN* (Aylett). M. (Grace Mohr x Mohrson.) On the order of Suez. Fertile both ways. Net	VALIANT OLA (Noyd '55): EM. 24 inches. (Valiant Sdlg. x Ola Kala). Yellow border iris with small white area below beard. A charmer
TUNISIAN VICTORY (Haffelfinger). Similar to Vice Regal, only broader\$2.00	VANITY FAIR (D. Hall '51). ML. (Cherie x Fantasy.) Clean medium pink with deep red beard. Superb form and substance. H.M. '52\$7.50
TWENTY GRAND (Norton '53). M. 36 in. (Rainbow Room x Chantilly.) Blend of canary yellow, orchid and tan-gold; ruffled. Wonderful blood for ruffling, blends, orchids and possibly pinks	VATICAN PURPLE (Whiting '43). EM. (Missouri x Mata Hari.) Lovely purple. Delightful breeding for rich things. Grand form. Wonderful parent for darks. H.M. '43
TWILIGHT SKY (O. Fay '48). EM. (Pink Cameo x Floradora.) Nicely formed, clean dependable pink with tangerine beard. H.M. '50\$1.00	VEILED IN MYSTERY (Milliken '51). Unusual! An off-white with a dusting of the palest chartreuse. Standards and falls exquisitely fluted and ruffled. A violet-blue beard sets the flower
TWO SNOWS (Aleita H. Scott '52). M., 40 inches. Snow Flurry x Snow Carnival.) Big ruffled crystalline white with white-tipped, gold beard. Great substance and lasting qualities. Here is a show specimen and one that cannot miss as a breeder. Silver Medal winner at the 1952 Horticultural Society New York show\$5.00	apart from others
ULSWATER (H. Randall '52). M., 38 inches. (Helen McGregor x Cahokia.) Another beautifully smooth light blue from a superb cross. Can't fail to produce outstanding seedlings in blues and whites. Scarce	VERNAL PEACE (Stevens). Beautiful light yellow
UTAH CREAM (Muhlestein '54). ML. 36 in. (Gold Ruffles x sister to Cream Gold.) Delightfully formed, flaring, waved cream of good size and late blooming habits. Should be a great parent. H.M. '54	Net
UTAH FIESTA (Muhlestein '48). EM. (Fiesta x Dubrovnik.) Rich orange blend with strong lavender flush in falls. Lovely, colorful\$1.00	WIGIL (Wills '47). EML. (Valor x Venus de Milo) x (Gudrun). Quality white that blooms over the longest period of any white we know. H.M. '47
UTAH LAKE (Muhlestein '50). ML. (Shining Waters x Great Lakes.) Large mid-blue self. Vigorous. Makes a showy clump\$1.00	VIIPURI (M. Williamson '40). M. (Sister to Wabash.) Ruffled amoena
UTAH SKY (Tell's '55). EM. 36 inches. (Sky Song x Gracious Lady). Very wide cornflower-blue with a bit of ruffling at the hafts. Won the blue class at the 1953 Utah Iris Society show. H.C. '54. \$12.50	VIOLET BRIGHT (C. Taylor '50). EM., 40 inches. (Snow Flurry x Violet Symphony.) Large ruffled violet-purple. Sure to be a fine parent for whites, blues and violets
UTAH SPECIAL (Muhlestein '50). ML. (Old Parchment x Mellowglow.) Delectable, luscious, delicate blend of peach, apricot, pink and yellow. Beautifully formed, ruffled flower. Should have partial shade from extreme sun for it will fade. Charm personified. \$1.50	(Sister to Arctic Snow). Lovely, flaring, violet self

(Snow Flurry x Cloud Castle.) This gorgeous, wide violet is worthy of its parents as well as its careful hybridizer. Another good one from a superb cross. H.M. '52. Winner of the President's Cup '53, A.M. '54	Flurry) x ((Easter Morn x White Goddess) x (Cloud Castle)). Big, ruffled, beautifully formed white that has been highly praised. Surely wonderful breeding for whites and blues. H.C. '51, H.M. '52. Net
VIOLET SYMPHONY (K. Smith '40). M. (Easter Morn x Violet Crown.) Wide, beautifully formed violet. Useful blood for blues, violets and whites. A.M. '43	WELCOME GUEST (J. Linse '52). M. (Tobacco Road x Treva.) Here is a luscious yellow-gold merging to amber at the edges. Charm itself, and blood for great things in blends and
VISTA VERONICA (Buss '50). M. (Blue Shimmer x Azure Skies.) Self orchid-blue identified by Dictionary of color as "Veronica". With such breeding how can it miss as a parent for blues and plicatas?\$1.00	browns
VIVEZA* (White '54). EM. 40 in. (One-quarter onco. Looks to be out of Gay Senorita.) Yellow standards, burnt sienna falls. Four-way branching. Sets seed	WESTERN HILLS (Mrs. F. Allen Brown '51). M. and re-blooms. (? Radiant?) Golden mustardtan and brown and the falls have a flush of peacock blue. Dependable re-bloomer and should be useful as a breeder in this class of
Road). Much richer Mexico-type. Falls very red. Should prove a parent for reds, blends and coppers and variegatas\$1.00	whispers (Linse '51). M. (Jasmine x Blue Rhythm.) Yellow and white bi-color, having
WABASH (M. Williamson '36). ML (Dorothy Dietz x ? Cantabile.) Long the standard Amoena. White standards, purple falls edged white. Leading parent for this color as well as neglectas. Dykes Medal '40\$.60	the shape and quality, to a great extent, of Blue Rhythm. H.M. '52

LILLIPUT (G. Douglas '53). 12 to .15 inches. (Helen McGregor x pumila, blue.) Ruffled and flared light lobelia blue-orchid with prominent spot of deep lobelia-blue on falls. White beard	TINKER BELL (G. Douglas '54). 10 inches. (Helen McGregor x pumila, blue.) Blue with deeper flush in falls
IVORY ELF (Daub '38). E. 12 inches. (Hermione, a trojana sdlg. x Betsy Presby). Light yellow bi-color. Almost a yellow amoeana\$.50	ZUA (Crawford '14). (Sport of Florentina.) Blue white heavily crinkled and serrated. Delightful border iris that blooms with a good many of the dwarfs. 14 inches

SPURIAS

Spurias belong to the beardless species. Their hard, strong, rhizomes are ideal for holding banks. They bloom after the tall bearded season has closed. Their orchid-like flowers are splendid for corsages or for bouquet work and arrangements. Here is an open field for hybridizers who desire to work with this species. Their disease resistance make them the easiest iris to cultivate.

(Spurias will be shipped after Sept. 1st—Order these on a separate sheet.)

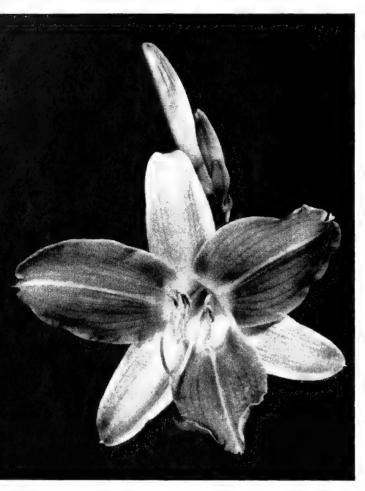

- BLUE ACRES (Mrs. T. A. Washington '48). 40 inches. Beautifully formed, flaring light silvery blue-white. Surely will be most useful with other varieties for new colors, and may be the one to breed the first all white spuria...\$4.00
- BRONZSPUR (Nies '41). (ochraleuca x Monspur, F2.) Blend of brown and yellow viened sepia. Splendid parent for many colors......\$1.00
- CHEROKEE CHIEF (Nies '52). 38 inches. (Undoubtedly from Russet Flame.) Stunning rich coppery-brown. No pollen, ordinarily, but will set some seed. H.C. '50, H.M., '51. Net......\$3.00
- FAIRY LIGHT (Thorup '49). (Shelford Giant x yellow spuria.) Lemon-chrome. Flaring falls bordered one-eighth of an inch white. Very vigorous of growth and increase. H.M. '48 \$1.00
- FAIRY WAND (Washington '31). Unusual blended tan, and a large flower. Pollen, but a little difficult to pod......\$1.50
- **GOLDEN AGATE** (Nies). Stunning brown with gold undertones and a dark brown band running around falls. 42 inches tall......\$2.00
- GOLD NUGGET (Milliken '31). Rich golden yellow self\$1.00
- LARK SONG (Nies '46). 36 inches. (Bronzspur x sdlg.) Critics generally agree that this is the loveliest spuria. The flowers are heavily frilled, falls flare horizontally and are wide and full, and of a rich yellow, styles and standards nearly white. Destined to be popular when distributed.....\$3.00

SPURIA IRIS SUNNY DAY

- MONTEAGLE (Washington '36), 34 inches. Nearest to an orchid-purple is this unusual glowing bronze-red purple. Flaring falls. Very distinct and different, it should prove a great parent for new colors, possibly to improve the blues. Fertile both ways. Net............\$3.00
- MT. WILSON (Milliken). 36 inches. Blue with the yellow signal. Net......\$1.00
- PASTORAL (Nies '43). 32 inches. (Bronzspur x Saugatuck.) Flaring falls orange-yellow, edged pale lavender, while the erect standards are yellow changing to lavender, styles light lavender with deeper crests.........\$1.00
- RUSSET FLAME (Nies). 36 inches. (Bronzspur blood, surely.) Russet-copper. Not as vigorous of growth as most Nies' spurias, for me, but lovely when established...........\$1.00
- **SUNNY DAY** (Hans Sass '31). Lovely, large, full, very rich yellow. Should be a fine parent. \$1.00
- TWO OPALS (Nies '46). 36 inches. (Fifth Symphony x Saugatuck.) Blend of pale lavender and cream. Falls very wide, the flower is delightfully ruffled. One for close-up inspection. Great substance. H.M. '46. A.M. '50.....\$1.25
- WHITE HERON (Milliken '48). Perhaps the giant of all spurias. The shape, size, and over-all quality is superb. Almost white with creamyellow shadings at the center. H.M. '50 \$2.00

HEMEROCALLIS (Daylilies)

CABALLERO

This popular perennial is gaining friends by leaps and bounds. It blooms from late spring through the heat of summer and many kinds rebloom until frost. "Hems," as they are called, give bloom when there is little else in flower during the heat of summer. They grow into compact clumps and are very disease resistant, and once established withstand lack of moisture quite as well as the bearded iris.

We will ship these, at the same time as the Spurias, during September. They may be ordered with Spurias, but on a separate sheet from Tall Bearded or Dwarf Bearded iris.

ALBION (Wheeler '52). Big light lemon that is α near-white. Recurved flower that stays open into the night. Long season of bloom....\$3.00

BERCEUSE (Wheeler '49). E. 36 inches. Evergreen. Wide, smooth pink bi-tone......\$3.00

NARANJA (Wheeler '48). ML. 36 inches. One of the finest orange daylilies. A.M. '53\$3.00
ON TOUR (Russell). Lovely pale ruffled lemon, very wide. July. 3 ft
PAINTED LADY (Russell). Another giant among daylilies, spreading 8 to 9 inches with a cinnamon-brown overlay over rich yellow with luster. Has topped the Symposium several seasons. Midseason, Evergreen, 3 ft\$1.50
PAMELA (Kraus '50). L. 40 inches. Broad butter- cup yellow. A model of perfection\$2.00
PINK BOWKNOT (Taylor '48). EM. 38 inches. Ev. Soft pink on the salmon side. Triangular blooms are fluted and ruffled. A.M. '55\$5.00
PINK CHARM (Nesmith). Dusky rose-pink with light yellow center. July-August. 4 ft\$1.00
PINK DREAM (Childs). M. 36 inches. Rated new baby-ribbon-pink. H.M. '53\$5.00
PINK PRELUDE (Nesmith '50). M. 39 inches. Semi- Ev. Large, full pink self except the touch of cool yellow at the base of the sepals and petals. Has no trace of salmon. Selected for trial at Wisley (England). H.M. '52\$9.00
PINK DREAM (Frank Childs). D. Midseason and extended. Quite pink, it holds up well in heat and adverse weather, even into the late evening hours. 2 th
ning hours. 3 ft
Deep burnt orange with overlay of red. Deep orange throat. Broad and reflexed. Takes the weather\$1.25

POTENTATE (Nesmith '43). Pansy red-purple high in the Symposium of favorites, and a great breeder for many colors including pinks and rich oranges. 42 in. Deciduous. First in PRIMA DONNA (Taylor '46). E.-M. 36 inches. Combination of buff, copper and peach. Called "The Queen of all pastels". A.M. '52. Stout PSYCHE (Wheeler '50). H. 45 inches. Ev. Soft. yellow with pale lavender halo. Long, broad, QUEEN ESTHER (Sass '49). M.-L. 33 inches. Starlike brilliant crimson, A.M. '53............\$1.75 RED LADY (Stout '49). M. 36 inches. One of the best of the reds with ideal growing habits \$1.00 REDROCK CANYON (Milliken). Large orangered 51/2 inch flower of great brilliance and finish. Throat lemon-chrome. Semi-evergreen. ROYAL RUBY (Nesmith '46). 38 inches. Dorm. Medium sized flowers of near crimson red. A.M. '50\$1.50 RUFFLED PINAFORE (Milliken). Warm apricot daintily marked green in throat and heavily ruffled and creped on the edges. A charming TAMARA (Milliken). E. Mid. Bicolor of rosy-red, light yellow midribs and sepals......\$2.00 SALLY O'NEAL (Taylor '48). E. 34 inches. Ev. Waxy pale yellow. Buds twist interestingly to open upward in the manner of a tulip...\$2.00 STEPHANIE (Buck '50). E. 40 inches. Beautiful

TA MING (Nesmith '48). 35 inches. Orange-buff with perfection of form and finish......\$1.50 **VALIANT** (Cook '43). M. 42 inches. Wide, nicely fluted, satin-finished deep golden orange. A.M.

COLONIAL DAME

1956 HYBRIDIZING HINTS

As mentioned in my greetings, again I say iris seem to have more devoted hybridizers working (playing) with it than any other flower in cultivation today. Little wonder, then, that such strides have been made. How much greater, too, the possibilities that new colors and improved forms will be developed. The novice might well produce some new break. In fact it is very likely that some inexperienced breeder will make crosses that the "old hand" would not try. I know from my own experience that I crossed every flower that opened when I first started breeding iris. As a result of this haphazard crossing I had much experience (and hard work) but a couple of lucky breaks as well. Gold Ruffles resulted from a cross that I should never have made, perhaps, if I had been a breeder of some knowledge. How important Gold Ruffles as a breeder is, however, is just now coming into prominence. We find some varieties that are notoriously good breeders while others seem never to produce anything worthwhile. It will be my purpose, here, only to guide and stimulate the interested hybridizer—not in any way to suggest control of his breeding activities, for I believe we should encourage everyone to go his own way in hybridizing. We might, however, state that the wise breeder will build on the success of others. It would be foolish to go back to many of the species (such as I. variegata) when we have great advances in many colors which have descended from them. Orville Fay, however, went to I. pallida to get blood refreshment and vigor into the pinks. Undoubtedly some great things will come through the line. The use of diploid (24 chromosome blood), with Purissima to produce Snow Flurry has proven of inestimable value to hybridizers and Snow Flurry seems to produce good seedlings with almost any pollen parent. Mrs. Awalt crossed Snow Flurry with Pink Formal and among the seedlings was one tangerine bearded light pink—this crossed to Marsalla produced her 1955 H.C. seedling 6-55-1—a Mary Randall type flower.

I am sure a good many would-be hybridizers quit too soon, so to speak, and throw away their "impossible" seedlings without giving them full consideration as potentially good parents. For example if one should cross a plicata to Snow Flurry and fail to get any plicatas in the first generation (if that be his goal) he might throw all the seedlings away without using them for breeding. However, if he has patience and foresight he will go back for plicata blood either by bringing an outstanding plicata to these seedlings or by selfing or crossing sister seedlings among themselves—the plicata pattern being recessive should show up in the next generation. For those interested in breeding dwarfs and the new intermediates (and Median iris) the use of I. pumila (true pumila) seems to hold the greatest possibilities since its seedlings (resulting from the infusion of Tall Bearded blood) are almost always fertile both ways. If one desires to go in the direction of the dwarf he will breed these hybrids back to the pumilas and their derivatives and if he wishes to get taller plants (perhaps border plants) back to tall bearded parents would be correct. Perhaps in the 2nd and 3rd generation results, most satisfying, will be the reward. They won't all turn out, but along the way breaks in color will come. To get one of the new patterns of the falls (plicatas, tangerine-bearded pinks, etc.) into the dwarfs and some of the new breaks of the dwarfs (green color, colored signals such as the oncocyclus have, etc.) into the falls some amazing things may result. Surely new vigor will come to plants descended from I. pumila and this factor, alone, might be considered for it is well known that a great many of our modern T.B. iris are miffy growers—slow of increase and not too hardy. Perhaps some of the beautiful tender sorts will give some genes (when combined with this new blood). To produce iris that can be grown in the most rigorous climates, and perhaps some of the I. variegata derivatives that do not perform well in the warmer climates will blend with this pumila blood to produce iris that will grow equally well in all gardens throughout the world. Derivatives of the Regelias nearly all have fertile pollen to regular tetraploid T.B. iris and the resulting seedlings nearly all possess great vigor and show a tendency to rampant increase. Since most Regelias have rather narrow flower parts, and down-hanging falls, the wise breeder will choose parents strong in points to offset these faults. Dominion derivatives will give a width and flare to the falls, although some things like Purissima and its child, Snow Flurry, will also give good width to their seedlings.

For those interested in the oncocyclus and Regelia iris, and their derivatives, a few words. If you find it difficult to maintain the pure oncocyclus species after they have bloomed it would be well if you selfed these (such as Susiana, Gatessi, etc.) and you should theoretically get pure strains of these—that is if you grow seedlings from I. susiana selfed these you could identify as pure I. susiana. The same may be said of seed grown from Gatesii, Nigricans, etc., although in the later two varieties there seems to be quite a variation in the seedlings. Perhaps some long ages past there appeared a mutation (or slight variation) in the wild forms, or some hybridization took place either by insect or other host which may have purposely (or accidentally) carried pollen from one distinct species to another. The oncocyclus and the Regelias, (both being Diploids) intercross with ease and the resulting seedlings (referred to as onco-regelias, or oncogelias) bear a marked resemblance to the oncocyclus—many of them carrying strong signal patches on the falls. They are much easier to grow than either of their parents. The onco-regelias will in turn cross easily to either the Oncocyclus or Regelias again. All of these hybrids produce plants that die back in summer—leaving little or no trace of their existence. The plants remain dormant until late fall when growth starts anew. Up to this time the plants should receive as little water as possible, and if grown in an area where much rain is experienced it would be well to lift the plants and store them in sand, sawdust or other dry material (in a cool place) until late fall when the large plants might be divided, dusted with some germicidal powder, and replanted. Seedlings, however, should be kept

areen, and growing, from the moment they germinate if good growth and early bloom is to be expected. Since oncos and Regelias germinate rather poorly the first season various means of stimulating germination might be tried—even to embryo culture of the seed (which is rather involved and takes a certain amount of skill and special equipment). Some have found the seed may germinate better if held over a year before planting—others planting the seed immediately the pods start to brown (even before they crack open). But in any method of "natural" planting of these seed in frames, pots or boxes germination will continue over a period of several years. I have had better germination among such seed after the 5th year of planting and up to the 7th year, yet I have no doubt the seed (ungerminated) will continue to germinate for several years yet. Bulletins of the American Iris Society will keep hybridizers posted on new developments and techniques in germination and Embryo Culture. October 1955 Bulletin No. 139 carries a very good article on Embryo Culture of Iris Seed by L. F. & Fannie R. Randolph. Bulletin No., 132, page 22 has an article entitled "Dykes Medals Made Easy" by W. F. Scott that shows the mechanics of hybridizing iris. giving, as well, examples of good crosses. Perhaps some of these bulletins are still available at American Iris Society Headquarters, address found elsewhere in this catalog. But getting back to these interesting oncocyclus and Regelia flowers—let us hope that someone will develop hardy plants in these that may be grown without special care or conditions. C. G. White has produced flowers that are quite definitely oncocyclus in appearance, yet they contain so much oncocyclus blood they are still a little difficult for most fanciers to grow. Perhaps someone will retain the onco-look and give us easier, more hardy plants. We know, of course, Capitola is a rather dominant pollen parent and produces lovely wide flowers. Wm. Mohr when induced to seed production gives a great array of unusual seedlings many of which show some onco characteristics, but few if any carry over the signal patch of the oncocyclus. Ib-Mac shows a suggestion of a signal (it being, by the way, the parent of Capitola) and some of its seedlings also show this same tendency. Perhaps if Capitola and Ib-Mac are employed as pollen parents with the pure Oncocyclus (or even with seedlings of these) the right genes may get together and produce an exotic onco-looking flower with vigor and hardiness—one that may stay green and not die down during the summer. Capitola, Ib-Mac, Joppa Parrot, Asoka of Nepal, etc. have been used on the oncocyclus and onco-regelia hybrids with some success. What Ardrun might give in seedlings will shortly be known since it has fertile pollen, and pods as well, yet, like the White hybrids, is a little difficult to grow in some places. However, Ardrun put to Susiana, Gatesii, Nigricans, etc. may very well produce something that would prove hardy. Some things that are not hardy or easy to grow will, themselves, breed hardy plants—Wm. Mohr, Purissima, Snow Flurry, etc. are good examples, but there are countless others and some will be better than another for use in certain areas. For instance Capitola has a tendency to bloom early as do most of its seedlings—and might, therefore, prove of little value in areas where late spring frosts (at iris time) may be expected. One might, however, use pollen of Capitola on very late blooming things thus getting seedlings that may bloom later in the season. There are always possibilities, and that is what keeps us hybridizing, trying; yet if things were too easily accomplished we might have far fewer breeders at that.

I have always marveled the hybridizer brave enough to try wild and unorthodox crosses. Henry Sass seemed to be one of these. His lines of new things would show such iris as Sable, Flora Zenor, Dore, Prairie Sunset, and the yellow plicatas (to mention only a few) all mixed up in what would look like haphazard crosses, yet here, finally, would be a real beauty—actually a break in color. That a far greater number of seedlings have to be grown when wide crosses are made is only natural, however, it is the best way to get new colors, breaks, vigor, etc. The value of these as breeders, too, might be great since they may be useful in several directions for many colors if they contain blood of reds, pinks, plicatas, blends, yellows, whites, "blacks", etc. And such iris might well give further breaks in color and form, not only to the hybridizer who knows their background, but by other breeders who might have just the right thing (or things) to use with them. Wm. McKee's Moontide although being a yellow produces good reds, blends, variegatas, rich yellows, and is twice in the pedigree of Fair Day, proving its worth as a fine and unusual parent.

Last year we visited Mrs. James R. Hamblen's planting several times. We saw, here, some unusual seedlings. Two years earlier Mrs. Hamblen had bloomed some ordinary violet seedlings from Helen McGregor x Radiation. These Mrs. Hamblen crossed with pollen of Palomino—the results were quite something to see. There were whites with red beards, blues with red (tangerine) beards, peach-pinks, orchids, and salmon-toned by-products so often seen in the pinks, but the one that took my fancy was a huge, wide, ruffled, pale violet that seemed to have every good quality one could ask for in an iris. Mrs. Hamblen had been quite ruthless in pulling up seedlings that were not up to her high standards or really distinct enough to keep. All through the seedling beds were long stretches of bare soil—between some stakes not one seedling remained while others had only one or two and a few unbloomed plants, but in this one cross (just mentioned) there was a forty foot row with only three or four bare spots where just one plant had been pulled from each. This would indicate the high quality of those seedlings remaining, although we saw, too, some rather good looking seedlings in the high piles of seedlings that had been discarded—these might have been good enough two or three years earlier, but not now-competition being what it is. The good ones that remained surely will have a chance to prove their worth. Everyone who saw her seedlings felt that remarkable progress had come to this careful hybridizer. We might ask (in the case of this one cross) what should have been lost had Mrs. Hamblen failed to use those Helen McGregor x Radiation seedlings when they were not quite what she had hoped they might be? This would surely prove that breeders must look ahead and carry on several generations of

breeding to reach a goal. In Mrs. Hamblen's experience only two generations were needed to give wonderful results, but these good things will lead to still other novel seedlings. The cross was a natural, of course, going back to Hall's Palomino (which made the 2nd generation seedlings three-fourths Hall pink blood) and would insure that some should be pink or of mixed-factor pink characteristics. That Helen McGregor contributed greatly to these seedlings is apparent—so very much so that I would recommend such breeding to other hybridizers. Some might think that since the cross has already been made some years in advance that nothing further could be accomplished. Actually no one hybridizer could ever grow enough seedlings from any cross to explore the possibilities of that cross. Modern iris are so mixed in their bloodlines that it would require upwards into the millions of seedlings of a cross to explore the possible combination and recombination of genes. We need only look at the thousands of seedlings that have been grown from some of the crosses that have produced good iris: Purissima x Capitola—good things are still coming from this cross, Snow Flurry x Capitola, Purissima x Cloud Castle, Snow Flurry x Chivalry, Snow Flurry x Cloud Castle, etc., etc.

Another Utah hybridizer had some rather striking and unusual seedlings (which I did not see) from Rosedale x Firecracker. One might envision tangerine-bearded plicatas, Chantilly-laced things, and a host of other breaks coming through these seedlings. This man, Bion Tolmon, of Salt Lake City, has had quite some experience with records and results in the hybridization of Sugar Beets which seems to have given him a keen insight into breeding iris. That the surface has just been scratched is quite apparent. Wouldn't it be fun to see the work of hybridizers fifty years hence? But in the meantime can't we all have fun in producing good (and bad) seedlings learning as we go along!

Out-breeding (bringing in new blood) while fascinating, and quite important in the hybridizers' program, need not concern the average hybridizer, or one who might only have enough space for the growing of a few planned crosses. If one has some known good parents or some novelties that look to be promising as breeders he should try his luck, by all means, to grow seedlings from these iris. No two breeders will get exactly the same results from any cross, so even though the cross has been tried, time and time again, don't let that keep you from making such a cross if you feel it is a good one.

There are some "rules" in hybridizing and we know that the crossing of whites should produce whites—or if they come from blues that a certain percentage of blues may also be expected. Blues to blues will breed blues, pinks to pinks will give pinks, purples to purples—shades of purple, plicatas to plicatas will produce plicatas and those lemon by-products. These things may be predicted when the iris are not too mixed or involved in their background. But what to expect when a variety may carry some oncocyclus, Regelia, and Tall Bearded blood? And what if the pedigree has pinks, whites, purples, plicatas, reds, blends, variegatas, etc. in various combinations? Anything might result. However, certain refinements have been made. Modern iris nearly all are of a clean and smooth finish—that is they have lost the often rough appearance and their hafts are quite without vienations. That Mary Randall and Argust Pheasant might be crossed with good results is probable, or Cascade Splendor and Pink Formal, or any number of other "wide" crosses might give good and unusual seedlings. Most of these do, anyway, have some common blood since the work of the Sass Brothers found favor with most of the breeders and while the various hybridizers used this work in different ways the blood would not be "foreign", as it were, when some of these crosses are accomplished. Hall's Pinks, for instance, all carry the blood of Prairie Sunset through Golden Eagle, while Chantilly's blood also carries Sass' Rameses. In crossing Midwest Gem and Chantilly, then, (a "natural" cross, by the way) a certain amount of line-breeding results. Of course if we go back very far we must eventually find that all of our modern iris descended from only a handful of the collected species. But the work of breeders in England, Australia, New Zealand, Canada, France, Germany, Italy and the United States has all been on slightly different lines and tastes. Bliss' Dominion started a new race of plants, surely, and we owe much to this hybridizer. Foster did much with his hybrids, as well as the whites from which Purissima and her great array of descendants now flaunt their colors throughout the world. The Sasses not only gave us smoother blends with the advent of Prairie Sunset (and its parents) but the first really good yellow-ground plicatas. W. R. Dykes' gave us the first big yellow in iris (named for him) and this, perhaps, carries dwarf blood which would account for some of the unusual things that have come through its breeding. We could go on through all the pioneers and the now famous hybridizers, both living and dead, to see where the long and interesting path started and where its branched vistas might lead.

And there are trends, too. Modern iris have come a long way from the straight and narrow, pinched, dog-eared falls seen in a great many of the old species and early hybrids. Today the connoisseur expects perfection of parts, great individuality or charm. There seems to be a trend for ruffling and Chantilly-laced iris these days, although I hope there will never be a fad for any one form over all the others since variety is most certainly "the SPICE" of the IRIS WORLD. That ruffling or lacing can add charm is without doubt, but tailored flowers are also beautiful as are some whose falls dip and wave (or even tuck) in just the right manner. Perhaps some of the charm of a great many of the oncocyclus is found in the way their great and wide falls tuck under at the ends.

To those, however, who want to breed laced iris the blood of either Chantilly or Midwest Gem is indispensable, and either are quite useful yet, although there are a great many seedlings descended from them that are, perhaps, steps forward. I have already mentioned Gold Ruffles as a great breeder—it, like so many others, is an even better grandparent. Rosedale, Pale Primrose, Lavender and Gold Lace, Matula, Song of Songs, Truly Yours, and Russet Wings are only a few

that should be useful in the breeding of lacing. Ruffled Apache (a cross of sister seedlings—Matula and Midwest Gem) will throw the lace-edge and will produce, as well, tangerine bearded pinks in the first generation—rather an amazing thing, really, for such a strongly colored iris for usually such strong color overpowers the pink color in the first generation. Ruffled Apache, too, by the way, breeds very large red-toned seedlings and might be useful in getting size, vigor and lacing into the reds, although here, perhaps, will be some work to refine the hafts unless just the right parent is used. Snow Flurry, of course, we know to produce ruffling. Perhaps this ruffling and the lacing combined may give us still further developments in these two factors. Snow Flurry and Chantilly have been crossed; and although lacing may not show in the first generation it surely should come out in the next generation—especially if such pollen parents as Queen's Lace, Clara B, Gold Ruffles, Truly Yours, Rosedale, Party Dress, Ruffled Gem or Midwest Gem be crossed to them. Some breeders are looking for lacing and more ruffling in blues and other colors. Azure Lake should be useful for lacing in blues as might Chantilly. With the introduction of Dr. Wanlass I feel a great step forward has been made. Chivalry has ruffling and the seedlings from it, Azure Lake, Snow Flurry, and Blue Flight combined should give some lovely ruffled and laced things. I was very taken with Night Patrol possessing the same kind of lacing in the falls that Azure Lake has, and the same horizontal flare. It should be most useful. Perhaps if Party Dress were crossed to Snow Flurry and the resulting lavender seedlings were crossed to the afore-mentioned blues and violets some lovely things would result. Tosca seems to produce wide, ruffled things and is back of a goodly number of outstanding new seedlings being bred by Clifford Benson and Dorothy Palmer of St. Louis, Mo.

From here let your imagination run wild. The foregoing "hints on hybridizing" have only been intended as a stimulant—and primarily for those who are not yet hybridizing but who, after reading this, will want to create some lasting memento to his ability as a creative artist. But, when you produce that beauty see that it is given a chance to be seen by competent judges. There are some breeders of plants who seem interested only in having fun with making the crosses and growing the seedlings and finally in pulling them all up and discarding them. I am sure many fine iris by the hands of some too modest hybridizers have been lost to the world forever. Send your seedlings to trial gardens, or to convention gardens, where they may be seen and properly appraised. Where might some of our pleasure be (as well as the unbloomed children of Snow Flurry) had Ruth Rees never carried the creation of her sister Clara to the great and good fancier Carl Salbach of Berkeley, Calif.? We all know our loss would be great.

OTHER HINTS

All sorts of strange things happen in our quest for knowledge and understanding of something we love. Intrigued by the iris Marquita I looked often at its bare anthers for pollen without success of finding any. One evening I accidentally broke off a bud that was about ready to open. The next morning (some hours after the sun had been upon the bloom) I walked by and seeing the flower about open I picked it up and twirled it in my fingers and to my amazement it had abundant pollen. I found the pollen fertile and bloomed quite a number of seedlings from it (a few from Snow Flurry that were quite good). There are some varieties that seem not to be able to dehisce due to the fact that the stamens (anthers) are rather heavy with moisture. Perhaps by breaking off the bloom in the evening and drying out before the flower might naturally have opened caused the pollen to form in the Marquita bloom previously mentioned. I have also taken these "fat" and watery stamens and removed the centers from them leaving only the portions on either side bearing the unopened pollen-carrying membrances, and then carefully opening these (by starting at the bottom of each portion) either removing the somewhat undry pollen to the envelope or exposing only until the pollen had further dried at which time I either scraped off the pollen, or if it appeared to be caked, rubbed it with the back of the tweezers, or my finger-nail, to bring it to a powdery state. Varieties such as Extravaganza never carry pollen or the ability to produce it, however, some other varieties such as Helen McGregor and Snow Flurry will, on occasions, produce pollen and with some help (as already mentioned) might very well prove useful pollen as well as pod parents. Some varieties like Capitola do not always have pollen, and at times very little. I have found the pollen of Capitola best when the plants are not overly-watered during the blooming season. Naturally it goes without saying that any pollen desired should be gathered and kept dry before a rain storm or before one might desire to water the plants with a garden hose by sprinkling. Remember the old adage: "Keep your powder dry!" If you do you will have it when needed and for quite a period of time for it will keep (if dry) for the extent of the blooming season. There are methods of using bottles with desicators, etc. and refrigeration of pollen which I will not go into since most fanciers would not be interested and the fancier who is may already know about these procedures.

PRODUCING THOSE SHOW BLOOMS

There are a great many iris shows today, and it certainly is one way of acquainting the public with the advance our hybridizers have made. I believe most amateur growers of iris grow them better than the commercial growers simply because they give individual care to each of their clumps and watch over them more closely—perhaps, too, feeding, watering and doing other little things that bring them to the peak of perfection at the time of their "Curtain Call." Every fancier who likes to exhibit wants to show a fine specimen. Some iris have a tendency to throw too many bloomstalks—when this happens they seldom produce show specimens, unless the clump if adequately spaced from another, properly fed, and fully robust. In event a clump appears to be producing too many stalks it would be wise (if the fancier wants larger, better flowers) to remove

some of the stalks as soon as they make their appearance. For example if a new plant (or even a small 2 year clump) had 5 stalks it would be well to remove all but one or two. If you intend to show and you are not interested in another stalk in the garden to see (or to use for hybridizing) then all the stalks but the most vigorous looking one should be removed. It will surprise you how much more beautiful will be this one stalk. Some varieties tend to bloom too heavily and as a result their flowers are nearly always small and one is unable to see the "trees for the forest". While the first year plant may not always give typical bloom it is quite often the most satisfactory (if it does bloom) to give one an idea of the flower at its best if it is well grown and properly nourished. Very often crowded clumps (especially those near other plants or shrubs) produce too much bloom or not enough (if the clump is too old and the rhizomes are on top of each other).

GETTING THE BLOOMS TO THE SHOW

Now for the exhibitor who wants to show. Iris are difficult to transport—especially if the blooms are open. Buds about to open can often be wrapped carefully with paper and the stalks placed in boxes and thus carried to the show room where the papers are removed and the buds allowed to open after being placed in their vases. Yet there is always the possibility some buds are misjudged and these will not open in time for the judging, so fully bloomed specimen stalks are often selected from the garden to show. But, how to get them to the show-room without breaking off a standard, a fall or injuring the bloom in some other way? I have been told the best way is to hire (or own) a chauffeur to take you to the show room while you carefully hold a stalk in each hand—this, of course, after you have first placed yourself in the car and then have one stalk placed in the left hand and the other in the right hand for the precarious journey—hoping all along there may be no accident of any kind and that the stalks may be placed in their vases for judging without the slightest blemish. Most of my good friends who exhibit bring their blooms to the show in staggered bottles that are placed in boxes with compartments for holding these bottles (either milk bottles or soft-drink bottles) and by first removing the back seat of the car and placing the botles (half filled with water) in the boxes (or cartons) then one by one carefully placing the stalks, being sure no bloom touches another (neither the sides or top of the car) for any rubbing would make the bloom less attractive for exhibition and surely spoil its chances of winning in close competition. Or one might have a bucket (wide at the base) or a tub to which you have fitted one inch chicken-wire—making a double layer—one about 3 or 4 inches from the bottom of the container, the other fitting along the top. The stalks may be placed at various points through the wire (the bottom giving support to the bloom-stalks so they do not fall over) to hold them at just the right distance from each other. If there is any fear the container might fall over it would be well to anchor it with some weights (or material about the container) to keep it from over-turning. If a storm is expected it is wise to select and cut all exhibition stalks the day before the show. Caution here, must be taken, however, since the stalks should stand perfectly straight in the containers unless you want bent stalks or flowers and buds that are "pointing off toward Joneses" in which case they are useful for arrangement purposes only. If you have a backward specimen you might cut and place it in warm water in a warm room leaving a light on all night to encourage the growth and development of buds. Or if your blooming season is advanced and you see there will be little to exhibit if you do not cut and put some of the stalks in storage, you cut well developed stalks with buds that might open within a day or two and store these in a coldstorage plant (in water of course) where the temperature would be about 35 to 40 degrees F. If you have no such place you may have a florist who would do it for you, a butcher-shop or you might even empty your refrigerator for a few days-living as your mother or grandmother did without this modern convenience. Oh, I am not so young that I don't remember emptying the water-tray from the old ice-box, and we thought we were lucky having one of the half dozen ice-boxes in the little mining town in which I was born and raised in Colorado. Anyway, this might give you some ideas. There are others known to fanciers who take fully opened blooms in boxes—using sticks, supports of paper, etc. to bring the blooms in good condition to the show, even to sending them by mail to some distant show or fancier.

BREEDING THE SPURIAS

Renewed interest in Spurias is here. Perhaps the pioneer work by Nies has done much to help this flower's popularity. Surely there is great room for many hybridizers of this flower, and much need for a wider color range. Perhaps other beardless species (such as the Louisiana iris) will be useful to cross with the Spurias to get new colors such as red, pink, purple, etc., into this race of plants. I have had what I believe to be some success using Dorothea K. Williamson with the Spurias, however, will have to await the actual blooming of these seedlings to see if anything unusual results. The Washington hybrids such as Monteagle, are quite possibly of a different chromosome makeup to the Nies spurias, however, I have accomplished crosses between these. For perfection of form and size you will want to use Wadi Zem Zem and White Heron (undoubtedly the later being a seedling of Wadi Zem Zem) and for quality in the blues Color Guard. For ruffling Two Opals and Lark Song. These beardless iris have a very fine and light pollen that blows about readily and it dehisces very often even before the flower is fully open or very shortly thereafter. So it is wise to open all buds well before they are due to open normally—remove both the falls and the pollen bearing anthers (these may be saved in labeled envelopes if desired for use later) and the stigmatic lip should be pollinated with the desired pollen, and if one wishes to be doubly sure each bloom should be bagged with a little plastic bag for a day. Spuria seed should be planted immediately (as soon as the pods start to crack) and before the seed has had any chance to dry out at all. If allowed to dry before planting it will not germinate the following spring, but will start in the

autumn and continue again the next spring. These seedlings are very fine and require care in transplanting—never allow them to dry out at all until they are well established and growing vigorously after which they will stand quite a little drying, etc.

FOODS AND FERTILIZERS

Iris grown in the same soil over a period of years naturally take out of the soil certain elements peculiar to their particular need. It is, therefore, the task of the grower to replenish the soil. Good gardening practices will aid in maintaining a good iris garden. The commercial grower has ${f a}$ different problem to the small estate or home gardener. If iris clumps are lifted and divided every two or three years, or fresh plants started in alternate years to keep new clumps coming along there is always a fresh and healthy supply of rhizomes (thus good bloom) of favorites and should some mishap befall one clump the other should remain. When new plantings are made it would be well to make sure the soil is replenished by adding humus, a balanced commercial fertilizer or well rotted barnyard fertilizer, compost, perhaps trace elements (if needs are known), and even river-bottom silt if obtainable. If one's soil is on the heavy side (clay) and without good drainage that T.B. iris require it would be well to incorporate a supply of sand in the soil. If soil is really poorly drained it might be well for the grower to dig a trench putting into the bottom (14 to 20 inches below the level of the normal position of the rhizomes) some gravel, soil, and then again the sand and soil mixture. If one lives in an area prone to much rain it might be well to plant the rhizomes on ridges or long mounds—wide enough to insure good growth; ditches prepared to carry off the excess rain. These ditches might be blocked off, however, during the season when water may have to be supplied by hose or irrigation to insure the plants enough moisture. Once plants are established late fall dressings of barnyard fertilizer or compost may be supplied which will insure good humus content in the soil. If sawdust is applied to the soil the fancier must make sure to add enough nitrogen fertilizer to the soil since in the breaking-down process of the decomposing of the sawdust much nitrogen is used. If, however, one has a composting pit (or pile) he may add sawdust to the pit and use it only after it is well composted and in this way he will not have to supply large quantities of nitrogen fertilizer. In some areas (especially where the soils are high in acid content) Bone-meal is found to be a very good fertilizer. It is slow and supplies the lime (Calcium) that most bearded and oncocyclus iris seem to require. Side dressings of a balanced commercial fertilizer lightly applied in the early spring (before bloom stalks advance) will help to insure tall and vigorous spikes and lovely colorbut a warning must be sounded—that of supplying enough moisture to deliver the food to the plants and to make those stalks tall and vigorous. Iris cannot produce good stalks without adequate water before blooming and during the blooming season. It will help, too, to insure flowers of good substance and better lasting qualities. After flowers are open it will be wise to try to avoid sprinkling the blooms unless, however, this may be unavoidable. We find, too, that iris plantings surrounded by great expanses of lawn seem to bloom later in the season. Perhaps this is due to the cooling effect of the grass and the fact that it must be kept watered. Iris, too, grown in the shade will bloom much later. Fanciers might plant (or even artificially shade some plants) to bring on bloom at a specified time. If you have occasion to burn paper, leaves, wood or other organic matter the ashes will be most useful to add to your soil at any time, and especially when rejuvenating a spot or where you are setting out new plants. If you have a fire-place save the ashes for your garden or to add to the finished compost. Even coal-ashes (if not too coarse) have been found to be very good to add to extremely heavy clay soils. Very light sandy soils could well do with some additions of heavy soil clong with the compost and other organic fertilizers such as barnyard or poultry fertilizers. If poultry or barnyard fertilizers are used under the ground they should be dug in well and deep enough to prevent their burning the rhizomes or roots, and in time they will decompose completely and the roots will feed down to the beneficial food below.

The growing of iris will, of necessity, be different in various parts of the country (or world). Experience is always a good teacher, and we should rely on help of fanciers in the same area. If you live in a region where infestations of borer are common some spray known to be effective against these pests must be used. Wettable D.D.T. used with a sticker-spreader (mixed in water solution) and sorayed on the iris every week or 10 days in the early spring and on through the blooming season will combat the borer larva. There are several sprays on the market, too, under trade names and advertised in the A. I. S. bulletins. So, we urge everyone interested in iris to

JOIN THE AMERICAN IRIS SOCIETY AND THE IRIS SOCIETY OF GREAT BRITAIN

Four quarterly bulletins of the American Iris Society will keep you up-to-the-minute on the latest in IRIS news and varieties. Yearly membership \$4.00. Family membership (husband and wife) \$5.00. 3 years' membership \$10.00.

Membership in the Iris Society of Great Britain \$3.00. The year book is a must.

Send memberships for either society to:

THE AMERICAN IRIS SOCIETY, 390 Hillsboro Rd., Nashville, Tenn., or send a check payable

to American Iris Society and include it with your order for plants and I will forward same.

To anyone not already a member of either of the iris societies I will offer a pink seedling (or any other color) if the membership is included with an order for iris. Just send your check made out to The American Iris Society and request the seedling on the order sheet, making a choice of a color preference.

Utah iris fanciers are urged to join the Utah Iris Society, dues \$1.50 per year. Send your dues

to: Hugh C. Lewis, 627 3rd Avenue, Salt Lake City.

For those interested in Oncocyclus and Regelias (and their derivatives) we suggest the newly organized ARIL SOCIETY. Write H. Valmar Slamova, Court of Iris, P.O. Box 606, Bellflower, California.

INTRODUCING JAN ELIZABETH

Our Newest Seedling Born: January 18, 1955 PARENTAGE: (Marie Phillips Muhlestein

Tell Muhlestein)

Composite of the best qualities of her delighted parents, but resembling more the "pod" parent. We feel she is a new Color-break. Not yet for sale, but will give her away when the time comes.

For all we wish the same happiness

That has been ours through the blessings

Of our Lord, the graciousness of our friends,

The love of our family and the delight of our

"seedlings": Grant, 9; Martel, 7; Vickie, 4; and Jan.

Yes, all this and a new Eight Acre Field.

HAPPY NEW YEAR

(The friends and relatives who received our 1955 Christmas greeting, and New Years wishes, were so pleased with it that we thought the host of friends and customers to whom we were unable to send the greeting might also get a "kick" out of it. So, although our wishes and greetings are belated they are, nevertheless, sincere and heartfelt.)

Note the spiral in the sky.

That's mans' aims that soar so high.

A look into the future!

Is this the IRIS we will work for?

HAPPY BIRTHDAY

TELL'S IRIS GARDENS

(Tell Muhlestein)
